Scientific Papers Made Easy Stuart West,Lindsay Turnbull,2023-01-30 Writing scientific publications is a fundamental step in the research process Furthermore as science becomes more interdisciplinary and the number of journals continues to expand individual papers increasingly need to stand out to be read and have any form of impact It is widely assumed that students and early career scientists will simply acquire the necessary expertise However this could not be further from the truth many early career scientists find writing both intimidating and overwhelming writing is a skill that needs to be learnt and actively developed This novel book s fundamental principle is simple the reader must come first The purpose of a scientific paper is to pass on knowledge and so impactful writing must focus on attracting holding and illuminating readers The authors demonstrate how just a few simple pointers can significantly improve both writing quality and impact They tackle each component of a paper in turn providing a simple framework that makes clear what needs to be included and what doesn t and in what order They also provide advice for writing up different types of science from laboratory experiments to theoretical modelling The focus throughout is on the need to use simple jargon free English and to assume that the reader has little or no prior knowledge In summary the book is about writing better scientific papers that are more likely to be read and have impact Scientific Papers Made Easy is targeted at a broad audience of students and professionals across the

biological life and human sciences It uses simple biological and human examples that assume no prior knowledge and will resonate with any scientist

Reading and Writing for Civic Literacy Donald Lazere, 2015-12-03 This brief edition of a groundbreaking textbook addresses the need for college students to develop critical reading writing and thinking skills for self defense in the contentious arena of American civic rhetoric Designed for first year or more advanced composition and critical thinking courses it is one third shorter than the original edition more affordable for students and easier for teachers to cover in a semester or quarter It incorporates up to date new readings and analysis of controversies like the growing inequality of wealth in America and the debates in the 2008 presidential campaign expressed in opposing viewpoints from the political left and right Exercises help students understand the ideological positions and rhetorical patterns that underlie such opposing views Widely debated issues of whether objectivity is possible and whether there is a liberal or conservative bias in news and entertainment media as well as in education itself are foregrounded as topics for rhetorical analysis

Research Methods in Applied Settings Jeffrey A. Gliner, George A. Morgan, Nancy L. Leech, 2000-02 The authors of this unique text found that while most students can crunch the numbers quite easily and accurately with a calculator or computer many have trouble seeing the big picture or seeing how research questions and design influence data analysis As a result the authors developed a semantically consistent framework that integrates traditional research approaches experimental quasi experimental comparative into three basic kinds of research questions difference associational and descriptive which in turn lead to three kinds or groups of statistics with the same names This text helps students become good consumers of research by demonstrating how to analyze and evaluate research articles offers a number of summarizing diagrams and tables that clarify confusing or difficult to learn topics points out the value of qualitative research and how it should lead quantitative researchers to be more flexible divides all quantitative research questions into five logically consistent categories that help students select appropriate statistics and understand their cause and effect and classifies design into three major types

between groups within subjects and mixed groups and shows that although these three types use the same general type of statistics e.g. ANOVA the specific statistics in between groups design are different from those in within subjects and mixed groups
