The SADC Protocol on Gender and Development is the only sub regional instrument in the world that brings together global and continental commitments to gender equality in one instrument used to enhance accountability. The Southern African Gender Protocol Alliance is a network of country and regional NGOs that campaigned for the Protocol. It is updating implementation and tracking. Originally aligned to the Millennium Development Goals that expired in 2015, SADC Gender Ministers updated the Protocol and aligned it to the Sustainable Development Goals (SDGs). Beijing Plus Twenty and the Africa Agenda 2063. In July 2017, the Ministers adopted a Monitoring Evaluation and Results Framework (MERF) that is now the basis of reporting. 2018 marks the tenth anniversary of the SADC Gender Protocol and the Barometer. Moving with the times, the Alliance has expanded the two yardsticks in the Barometer: the SADC Gender and Development Index (SGDI) and the Citizen Score Card (CSC). The Barometer incorporates many MERF and SDG indicators as well as its own unique measures of voice, choice and control. The Barometer also introduces the Gender Responsive Assessment of Constitutions and Laws conducted by Alliance experts and networks around the region. A wealth of data insights and analysis awaits all readers of the Barometer that will also be made available online and in multi media formats. The SADC we want is one in which citizens engage, step it up for gender equality and make sure we achieve Planet 50/50 by 2030.

Frontiers in Marine Sciences, Social Sciences and Engineering Research Related to Marine (Renewable) Energy Development Zhen Guo, Zhenkui Wang, Shengjie Rui, Zefeng Zhou, Guanqiong Ye, Dongfang Ma, 2024-07-11

To coordinate the contradiction between economic development and climate change, countries all over the world are vigorously developing renewable energy. Among all renewable energy sources, onshore solar energy, hydro energy and wind energy are limited by the land and environment. The marine is rich in various energies including marine wind energy, wave energy, tidal energy and marine biomass energy, marine oil and mineral resources. In the development of marine energy, various offshore structures are generally adopted and constructed, including offshore wind turbines, wave energy power generation devices, offshore oil and gas exploitation platforms, etc. The safety and reliability of these structures are vital for marine renewable energy development. In the meanwhile, marine energy development involves multiple disciplines which are related to marine biology, chemistry, ecology and the environment. The interdisciplinary studies on these topics are also of significance in marine energy development. In addition, human activities, e.g. marine policy, marine transportation planning, environmental management, economic assessment and culture influence the development process of marine energy, which also needs to be investigated.

Physico-Mechanical Properties and Treatment Technology of Hazardous Geomaterials, volume II Xianze Cui,Bing Bai, Wenbin Fei,2023-12-22 This Research Topic is Volume II of a series The previous volume can be found here *Physico Mechanical Properties and Treatment Technology of Hazardous Geomaterials* New materials and technologies are emerging in every branch of geotechnical engineerings such as high speed railway subgrade soil improvement and remediation underground space structure ground energy storage energy pile energy geostructure energy tunnel tunnel waterproof engineering and marine engineering In addition to the common infrastructure construction materials it also includes the treatment of hazardous geomaterials resource utilization of industrial wastes geopolymer materials contaminated soils related to geoenvironmental engineering as well as other newly developed materials In recent years the advancement of new materials has promoted the development of geotechnical engineering and its close intersection with other disciplines Scholars have done fruitful work but the understanding of many new materials is not very clear Moreover the external environment e g heat water external force borne by various materials is becoming more and more complex The newly developed geotechnical materials involve the coupling actions of multiple fields such as physics mechanics chemistry and even biology Some new technologies and specifications are still developing For this purpose it is necessary to investigate the mineral composition and micro structures physico mechanical properties deformation and strength evolution process and constitutive characteristics of various geotechnical materials The research methods include theoretical description numerical simulation laboratory experiments and field tests The Research Topic aims to bring together Original Research and Review articles on the recent developments in natural geotechnical material improvement hazardous geomaterials synthetic materials geopolymer energy geotechnical materials and contaminated soil treatment *Instability Mechanism and Disaster Prevention of the Jointed Rockmass* Shuren Wang,Hongyuan Liu,Chengguo Zhang ,Xu Chang,2024-06-13 Discontinuities such as cracks fissures bedding planes etc resulting from different geological processes are commonly found in rock masses and often play a critical role in the initiation propagation and coalescence of new cracks due to stress redistribution caused by engineering activities and natural disturbances It is challenging to determine the instability mechanism of jointed rock masses but it is vital for estimating instability disasters in jointed rock engineering **Prevention, Mitigation, and Relief of Compound and Chained Natural Hazards, volume II** Qi Yao,Xiangli He,Wentao Yang,Wenwen Qi,Sansar Raj

Meena,Chong Xu, Liam Taylor,2025-05-29 The field of natural hazard research has become increasingly critical due to the intensification of global climate and environmental changes which have led to the frequent occurrence of natural hazards These hazards often overlap interact or occur in a chain reaction resulting in significant disaster losses with wide ranging impacts over extended periods Major earthquakes geological hazards extreme meteorological events large scale floods droughts marine disasters and forest and grassland fires are among the key factors affecting human safety and economic development worldwide Recent studies have highlighted the need for advanced perception intelligent early warning systems accurate prevention strategies and efficient rescue operations to mitigate these hazards However there remain significant gaps in understanding the compound and chained relationships between different types of natural hazards necessitating further investigation and innovative approaches

Failure Analysis and Risk Assessment of Natural Disasters Through Machine Learning and Numerical Simulation, volume IV Faming Huang,Peng Zeng,Sansar Raj Meena, Jiawei Xie,2025-08-26 Natural disasters which include landslides rock falls rainstorms floods and earthquakes appear as results of the progressive or extreme evolution of climatic tectonic and geomorphological processes and human engineering activities It is significant to explore the failure mechanism and carry out spatial modeling of these natural disasters due to their serious harm to the safety of people s lives and property Various advanced methods including successful remote sensing geographic information systems machine learning models and numerical simulation techniques are promising tools to analyze these complex disasters Machine Learning models such as neuro fuzzy logic decision trees artificial neural networks deep learning and evolutionary algorithms are characterized by their abilities to produce knowledge and discover hidden and unknown patterns and trends from large databases whereas remote sensing and Geographic Information Systems appear as significant technology equipped with tools for data manipulation and advanced mathematical modeling What is more numerical simulation can also be acknowledged as an advanced technology for discovering hidden failure mechanisms of disasters

GCEC 2017 Biswajeet Pradhan,2018-05-12 This book gathers the proceedings of the 1st Global Civil Engineering Conference GCEC 2017 held in Kuala Lumpur Malaysia on July 25 28 2017 It highlights how state of the art techniques and tools in various disciplines of Civil Engineering are being applied to solve real world problems The book presents interdisciplinary research experimental and or theoretical studies yielding new insights that will advance civil engineering methods The scope of the book spans the following areas Structural Water Resources Geotechnical Construction Transportation Engineering and Geospatial Engineering applications
