The Provision Of Professional Driving Services:

Uber—Brave New Service or Unfair Competition Jasenko Marin, Siniša Petrović, Mišo Mudrić, Hrvoje Lisičar, 2019-10-19 This book analyzes the legal issues connected with the provision of Uber related services It primarily focuses on the various contractual and non contractual relationships that occur during the use of Uber applications especially with reference to Uber headquarters Uber App Uber branch offices advertisements Uber partner drivers employees or self employed Uber application registered users Uber transportation service users contracting passenger and third party Uber transportation service users additional passenger It also provides a comparison of standard transportation services and contracts of carriage irrespective of whether the carrier in question is a common carrier contractual carrier actual carrier or an intermediary service provider Furthermore the book presents the relevant case law especially with regard to Uber as a taxi service Uber as a share riding service Uber as a rent a car with driver service Uber as an employer and Uber as a key organizer of transportation service in Croatia Belgium Germany Italy the Netherlands United Kingdom United States Hungary Argentina and France Lastly it explores the different legislative approaches to resolving various issues related to the appearance of Uber and similar companies the Laissez faire model Status Quo model Legal Adjustment model and the New Legislative Paradigm model The Governance of Smart Transportation Systems Matthias Finger, Maxime Audouin, 2018-08-22 This book presents essential new governance structures to embrace and regulate smart mobility modes Drawing on a range of case studies it paves the way for new approaches to governing future transportation systems Over the past decades Information and Communication Technologies have enabled the development of new mobility solutions that have completely redefined traditional and well established urban transportation systems Urban transportation systems are evolving dramatically from the development of shared mobility modes to the advent of electric mobility and from the automated mobility trend to the rapid spread of integrated transportation schemes Given the disruptive nature of those new mobility solutions new governance structures are needed Through a series of case studies from around the world this book highlights governance and regulatory processes having supported or sometimes prevented the development and implementation of smart mobility solutions shared automated electric integrated The combination of chapters offers a comprehensive overview of the different research endeavours focusing on the governance of smart transportation systems and will help pave the way for this important subject which is crucial for the future of cities Shared mobility and MaaS Yves Crozet, Georgina Santos, Jean Coldefy, 2019-09-19 This CERRE report finds that to effectively reduce congestion and pollution in cities policies should focus primarily on the rarest resource space Mobility as a Service MaaS also has a role to play in the transition towards truly sustainable mobility But this is provided regulation guarantees that new mobility models complement and not substitute for public transport European cities have been trying to enhance their mobility and transport systems while reducing congestion pollution CO2 emissions noise and accidents Local transport policies across countries

strive to encourage car drivers to switch to public transport but with limited success The authors of the report find that the lack of success of policies to encourage the switch to public transport is often due to the alleged trouble of using other transportation modes compared to the convenience of private cars If cities are to effectively reduce congestion and pollution regulation of access to cities must change dramatically Until now the constraints on the use of cars have largely remained low explain the authors An approach promising individual time savings will not benefit the collective interest To be efficient policies should focus primarily on the rarest resource for the community space Transport authorities must intervene on the uses of roads sidewalks and pedestrian zones It is up to them to define the balance between the different uses of roads In addition public authorities should significantly develop public transport systems that constitute a genuine practical fast reliable and affordable alternative The lack of public transport in areas of disperse and low demand due to financial reasons also remains a critical issue to be addressed The CERRE report also finds that new mobility services such as shared cars or free floating e scooters provide unprecedented opportunities to reduce the disutility users would face from simply switching from the private car to public or active transport Mobility as a Service MaaS enables users to change their routines discover the variety of mobility services available and to combine former and new mobility services Shared mobility providers may complement public transport especially by supplying first and last mile solutions and by serving areas where public transport is not financially viable However unless ridesharing replaces solo trips by car at a large scale the impacts on congestion pollution and CO2 emissions are likely to be neutral at best Urban mobility public authorities cannot neglect the opportunities brought by new mobility services Public authorities have to be more ambitious They have to enlarge their spectrum of mobility services that will in a financially sustainable way ease user life and foster alternatives to solo car use But to effectively deal with new mobility services authorities must develop new skills in the data and platforms areas Platforms information services and ticketing are crucial to increase the number of users of urban mobility services Although digitalisation cannot be considered a magic wand it plays a critical role in achieving this transition to new mobility services For MaaS to develop Mobility data must be gathered under the umbrella of Metropolitan Transport Authorities who are the only trusted party able to do so Policies for the use of roads should discourage the use of individual cars and incentivise ride sharing As long as individual cars can move freely and on the same roads and use services in the same conditions as shared vehicles it is unlikely that MaaS and shared mobility will be successful In addition public authorities need to modernise and grasps the opportunities that digitisation and data offer for the transition to a truly sustainable mobility conclude the authors

Taxi, Limousine, and Transport Network Company Regulation James M. Cooper, Jorgen Aarhaug, John Scott, 2023-05-11

The vehicle for hire VFH market broadly comprising taxis limousines and app based transport has faced multiple and significant changes over the years with the period since 2010 a time of major upheaval This book documents the development of the market over time examining its regulation and control structures exploring its history trends and market theories and discussing how these are both promoted and challenged by the changes affecting the sector This book reviews recent developments in the VFH industry from the influx of new market entrants and the emergence of app based services to their widespread use comparing international markets and their regulation and draws on a series of case studies in key locations in North America Europe and Asia It establishes and details economic market social and political theory affecting the VFH industry and devotes its second half to the definition and emergence of transport typologies and markets in which the sector has a role or potential role The book concludes from a neutral standpoint on the balance between market participants addressing the immediate future facing the industry including the impacts of Covid and other external factors It considers the short and long term effects of market change the role played by regulators and the market conditions imposed upon them Written for industry practitioners both suppliers and regulators as well as the academic community this book will inform the community and prompt further analysis of a significant and growing field in transportation

Paratransit in African Cities

Roger Behrens, Dorothy McCormick, David Mfinanga, 2015-09-07 Public transport systems in contemporary Sub Saharan

African cities are heavily reliant upon paratransit services These services are defined as informal transportation which operates between the public and individual private spheres In Africa paratransit is characterized by low quality of vehicles and chaotic management but it also provides cheap accessible and flexible transport solutions for the urban poor It is typically poorly regulated and operates as a set of informal businesses A common result of weak public sector regulation and a fare strategy in which owners claim a fixed daily revenue target and drivers who keep the variable balance as income is destructive competition and poor quality of service There is an incontrovertible case for improving the quality reliability and coverage of public transport systems and some city governments have attempted to do so by initiating reform projects that envisage the phased replacement of paratransit operations with formalised bus rapid transit systems In this book the authors argue that there are however path dependencies and constraints that limit the possible extent of public transport system reform Paratransit operations also have some inherent advantages with respect to demand responsiveness and service innovation Attempts to eradicate paratransit may be neither pragmatic nor strategic Two future scenarios are likely hybrid systems comprised of both paratransit and formally planned modes and systems improved by upgrades and strengthened regulation of existing paratransit services The business strategies and aspirations of incumbent paratransit operators in

three case cities Cape Town Dar es Salaam and Nairobi are discussed as well as their attitudes towards emerging public transport reform projects International experiences of hybrid system regulation and paratransit business development are reviewed in order to explore policy options The authors contend that policies recognising paratransit operators and seeking contextually appropriate complementarity with formalised planned services will produce greater benefits than policies ignoring their continued existence
