Learning with Damaged Colonial Places Theresa Magdalen Giorza, 2021-05-10. This book offers a close and detailed account of the emergent and creative pedagogies of children learning together in a small not for profit preschool and the entangled becomings of their carers as well as the researcher artist author. The mutually affecting and inseparable realities of the material and the discursive are made visible through lively and sensual pedagogical invention by a group of five year olds in the inner city preschool which is located in Johannesburg South Africa. These small local stories are recognized in their emergence with global geopolitical realities. The author makes a valuable contribution to post qualitative research through the use of visual research methods and non representational approaches to working with knowledge. The book draws on the constantly evolving practices of Philosophy for Children P4C and Reggio Emilia both as pedagogical tools and as research methods. Photographs and stills from video footage provide a sense of the relatively modest material environment of the school. The book celebrates the considerable richness of the involvement of the children and the enormous possibilities offered by the world both inside and outside of the classroom when an enquiry led art based pedagogy is followed. Drawings and other products created by the children in the study offer valuable insight into the depth and complexity of their engagement with their worlds both individual and collaborative.

Students at Risk of School Failure José Jesús Gázquez, José Carlos Núñez, 2018-10-18. The main objective of this Research Topic is to determine the conditions that place students at risk of school failure identifying student and context variables. In spite of the fact that there is currently little doubt about how one learns and how to teach in some countries of the developed world there is still there is a high rate of school failure. Although the term school failure is a very complex construct insofar as its causes consequences and development from the field of educational psychology the construct student engagement has recently gained special interest in an attempt to deal with the serious problem of school failure. School engagement builds on the anatomy of the students involvement in school and describes their feelings behaviors and thoughts about their school experiences. So engagement is an important component of students school experience with a close relationship to achievement and school failure. Children who self set academic goals attend school regularly and on time behave well in class complete their homework and study at home are likely to interact adequately with the school social and physical environments and perform well in school. In contrast children who miss school

are more likely to display disruptive behaviors in class miss homework frequently exhibit violent behaviors on the playground fail subjects be retained and if the behaviors persist quit school Moreover engagement should also be considered as an important school outcome eliciting more or less supportive reactions from educators For example children who display school engaged behaviors are likely to receive motivational and instructional support from their teachers The opposite may also be true But what makes student engage more or less The relevant literature indicates that personal variables e g sensory motor neurodevelopmental cognitive motivational emotional behavior problems learning difficulties addictions social and or cultural variables e g negative family conditions child abuse cultural deprivation ethnic conditions immigration or school variables e g coexistence at school bullying cyberbullying may concurrently hinder engagement preventing the student from acquiring the learnings in the same conditions as the rest of the classmates
