Excerpt from The Grammar of Science If I have not paid greater attention to my numerous critics it is not that I have failed to study them it is simply that I have remained obstinately it may be convinced that the views expressed are relatively to our present state of knowledge substantially correct Such changes in form as I have made have been chiefly suggested by further experience in the difficulties which await both pupil and teacher I can only conclude by expressing a hope that if old friends meet the Grammar in its new form they will not be displeased by either the superficial changes or the more substantial additions About the Publisher Forgotten Books publishes hundreds of thousands of rare and classic books Find more at www.forgottenbooks.com This book is a reproduction of an important historical work Forgotten Books uses state of the art technology to digitally reconstruct the work preserving the original format whilst repairing imperfections present in the aged copy In rare cases an imperfection in the original such as a blemish or missing page may be replicated in our edition We do however repair the vast majority of imperfections successfully any imperfections that remain are intentionally left to preserve the state of such historical works

Excerpt from The Grammar of Science During the eight years which have elapsed since this Grammar was first published the views expounded in it have undoubtedly met with wider acceptance than the author in the least anticipated There are many signs that a sound idealism is surely replacing as a basis for natural philosophy the crude materialism of the older physicists More than one professor of metaphysics has actually discovered that he can best attack modern science by criticising ancient statements as to mechanism from a standpoint remarkably similar to that of the Grammar Step by step men of science are coming to recognise that mechanism is not at the bottom of phenomena but is only the conceptual shorthand by aid of which they can briefly describe and resume phenomena That all science is description and not explanation that the mystery of change in the inorganic world is just as great and just as omnipresent as in the organic world are statements which will appear platitudes to the next generation Formerly men had belief as to the super sensuous and thought they had knowledge of the sensuous About the Publisher
