The Logics of Healthcare Paul Lillrank, 2018-01-03 Most of the current literature on healthcare operations management is focused on importing principles and methods from manufacturing The evidence of success is scattered and nowhere near what has been achieved in other industries This book develops the idea that the logic of production and production systems in healthcare is significantly different A line of thought that acknowledges the ingenious characteristics of health service production is developed This book builds on a managerial segmentation of healthcare based on fundamental demand supply constellations Demand can be classified with the variables urgency severity and randomness Supply is constrained by medical technology accuracy of diagnostics efficacy of therapies patient health behavior co-creation of health and resource availability Out of this emerge seven demand supply based operational types DSO prevention emergencies one visit electives cure care and projects Each of these has distinct managerial characteristics such as time perspective level of co-creation value proposition revenue structure productivity and other key performance indicators KPI The DSOs can be envisioned as platforms upon which clinical modules are attached For example any Emergency Department ED must be managed to deal with prioritization time windows agitated patients the necessity to save and stabilize and variability in demand Specific clinical assets and skill sets are required for say massive trauma strokes cardiac events or poisoning While representing different specialties of clinical medicine they when applied in the emergency context must

conform to the demand supply based operating logic A basic assumption in this book is that the perceived complexity of healthcare arises from the conflicting demands of the DSO and the clinical realms The seven DSOs can neatly be juxtaposed on the much used Business Model Canvas BMC which postulates the business model elements as value proposition customer segments channels and relations key activities resources and partners the cost structure and the revenue model

Understanding Healthcare Economics Jeanne Wendel, PHD,Teresa D. Serratt, PHD,

RN, William O'Donohue, PHD, 2017-11-22 Healthcare economics is a topic of increasing importance due to the substantial changes that are expected to radically alter the way Americans obtain and finance healthcare. Understanding Healthcare Economics 2nd Edition provides an evidence based framework to help practitioners comprehend the changes already underway in our nation's healthcare system. It presents important economic facts and explains the economic concepts needed to understand the implications of these facts. It also summarizes the results of recent empirical studies on access, cost, and quality problems in today's healthcare system. The material is presented in two sections. Section 1 focuses on the healthcare access, cost, and quality issues that create pressures for change in health policy. The first edition was completed just as the Patient Protection and Affordable Care Act (PPACA) was debated and passed. This new edition updates the information about access, cost, and quality issues. It also discusses the pressure for change that led to the passage of the PPACA, evidence that shaped the construction of the act, evidence on the impacts of the PPACA, and evidence on the pressures for future changes. Section 2 focuses on changes that are underway, including changes in the Medicare payment system, new types of healthcare delivery organizations such as ACOs and patient centered medical homes. It also discusses the current efforts to help patients build health such as wellness programs and disease management programs. And finally, health information technology will be discussed. The new edition will maintain the current structure, however, each chapter will be updated to discuss post PPACA evidence on each type of type. In addition to the updates previously mentioned, the authors will present a series of data explorations to several chapters. Most of the new data explorations present summarized statistical information based on de-identified data from one hospital electronic data system. These data explorations serve two purposes. First, they illustrate the impacts of the pressures for change, and some of the changes on healthcare providers. For example, the data illustrates the financial impact of pre-PPACA uncompensated care. Second, explanations of the data will require explanations of standard coding systems that are used nationwide: DRGs, CPT, ICD codes. Other data explorations provide detail about other sources of data useful for health policy analysis and for healthcare providers and insurers.

Next Medicine Walter Bortz, MD, 2011-01-03 Every year the average American spends about 7,300 on medical expenses. The typical Canadian pays 2,700, the Briton only 2,000. And yet, according to the World Health Organization, our healthcare system in terms of total quality ranks thirty eighth in the world, right between Costa Rica and Slovenia. Not only do 40 million Americans lack health insurance, but more than 200,000 die each year because of medical mistakes. Our average life expectancy is lower than Cuba's. In *Next Medicine*, Dr. Walter Bortz zeroes in on why the American medicine is spiraling toward disaster. A physician with fifty years of experience and a leading authority on aging, Bortz argues that the financial interests of biotech and drug companies have distorted the healthcare system. Thanks to them, medicine today is economically motivated to treat disease rather than to prevent it. Heart disease, for example, is widely treated with drug interventions and invasive surgery, both of which are extravagantly profitable for pharmaceutical giants and hospitals. Daily exercise and a healthy diet, on the other

hand can prevent heart disease and can be obtained by patients essentially for free but there s no money in that The medical industrial complex has a vested interest in keeping us sick and until that changes medicine will fail to effectively address the leading cause of disability and mortality today chronic diseases like diabetes that are largely preventable Bortz proposes a medical system that emphasizes personal responsibility and provides incentives for healthy lifestyle choices along with new training for medical professionals Through a lively narrative full of personal anecdotes and jarring statistics Bortz makes a powerful case for a radically new medical system one that is based on rigorous science and loosens the strangle hold of corporate interests on American health

Part 1 of the book follows the elders of the family from 2005 until 2011 The elders foresaw structural changes as well as crises of trust caused by elite circulation collusion and fragmentation of decision making benefiting special interests They chose to carry through a transition of power to their children whom had become stepparents of two nephews victims of their biological parents high and deadly profiles

A primary objective of the transition was to protect the family and reduce its profile in the media and markets by divesting holdings in traditional industries

The elders wanted the stepparents to prepare the next generation for an early transition of power and they involved the family's confidants as mentors They also financed a task force for security and intelligence with a hidden agenda

Part 2 and 3 of the book follow the endeavors of the next generation during 2012 2018 The family's values made the next generation take on responsibilities with a strong sense of duty The two

adopted sons sought innovation and experiences in both the south and north of Europe where they were faced with the causes and later repercussions of economic crises in 2007 2009 The collusion resulted in crises of trust and debt Their findings on deliberative transparent pluralism Good governance requires agility enterprise and ethics as well as collaboration fair play and predictability They pursued ideas benefiting the atomist the individual without influence alone by impartiality coresponsibility empowerment and collaboration They saw the need to reinvent activities of trustees fiduciaries and facilitate effective basic infrastructure benefiting also small and mid-sized enterprises SMEs without names in the markets and media Therefore they decided to promote and participate in a social enterprise for impact investing organized as an innovative collaborative value network CVN A CVN can reach into the real economies of maritime regions where needs of owners enterprisers and investors are similar everywhere The book draws a circle with an unexpected end one of the adopted sons encounters a young woman with a surprise connection to the death of his biological parents An early transition starts and a CVN approach for impact investing is set in motion New ways are commenced e g efforts to stop favoring of special interests as well as to draft a pact on altruism against obscurantism Telling about these endeavors ends the author's book series on pluralism ethics and enterprise The draft pact on altruism is not important but the idea of such a draft is when spread in growing circles This book and Nordic Model Analyses 2016 invite readers to participate in an anthology for building alternative visions of Nordic and similar societal models by combining pluralism ethics enterprise and welfare as well as gender parity secularity diversity and ecumenism Cf www.bankier.co *Business Transformation Strategies* Oswald A J Mascarenhas, 2011-02-14 A resource for industry professionals and consultants this book on corporate strategy lays down the theories and models for revitalizing companies in the face of global recession It discusses cutting edge concepts constructs paradigms theories models and cases of corporate strategic leadership for bringing about transformation and innovation in companies Each chapter in the book is appended with transformation exercises that further explicate the concepts
