Food and the Self Isabelle de Solier, 2013-10-10 We often hear that selves are no longer formed through producing material things at work but by consuming them in leisure leading to meaningless modern lives This important book reveals the cultural shift to be more complex demonstrating how people in postindustrial societies strive to form meaningful and moral selves through both the consumption and production of material culture in leisure Focusing on the material culture of food the book explores these theoretical questions through an ethnography of those individuals for whom food is central to their self foodies It examines what foodies do and why they do it through an in depth study of their lived experiences The book uncovers how food offers a means of shaping the self not as a consumer but as an amateur who engages in both the production and consumption of material culture and adopts a professional approach which reveals the new moralities of productive leisure in self formation The chapters examine a variety of practices from fine dining and shopping to cooking and blogging and include rare data on how people use media such as cookbooks food television and digital food media in their everyday life This book is ideal for students scholars and anyone interested in the meaning of food in modern life

comes to be shaped and why we see pendulum swings when it comes to the question of what to eat As food facts peak and peril in the face of conflicting dietary advice and nutritional evidence this book situates shifting food truths through a critical analysis of how healthy eating is framed and contested particularly amid fluctuating truth claims of a post truth culture It explores what a post truth epistemological framework can offer critical food and health studies considers the type of questions this may enable and looks at what can be gained by relinquishing rigid empirical pursuits of singular dietary truths In focusing too intently on the separation between food fact and food fiction the book argues that politically dangerous and epistemically narrow ideas of one way to eat healthy or right are perpetuated Drawing on a range of archival materials related to food and health and interviews with registered dietitians this book offers various examples of shifting food truths from macro historical genealogies to contemporary case studies of dairy wheat and meat Providing a rich and innovative analysis this book offers new ways to think about and act upon our increasingly complex food landscapes It does so by loosening our empirical Western reliance on singular food facts in favour of an articulation of contextual food truths that situate the problems of health as problems of living not as individualistic problems of eating It will be of interest to students scholars and practitioners working in food studies food politics sociology environmental geography health nutrition and cultural studies

Tackling the Obesity Crisis David Benton,2024-05-06 The obesity epidemic reflects a failure to understand how meals are chosen Government initiatives have failed and most people are unable to control their weight In this book an internationally recognized expert on diet and behaviour discusses the common misunderstandings that have created the epidemic and suggests how obesity could be reduced After dieting the body needs fewer calories and you are likely to put on weight Many people do not understand how to control their weight and rely on ideas that are simply wrong Natural foods are seen as healthier when they are not Ultra processed foods are seen as a problem when the method of production is unimportant There is little evidence that removing sugar from the diet banning advertising to children adding calories to menus or providing nutritional information on packaging reduces obesity In fact removing fat from the diet has increased obesity One conclusion is that current approaches have no chance of preventing obesity Without new ways of dealing with obesity it will inevitably increase reducing life expectancy after decades of disease So what needs to change One root cause of obesity is poverty The way infants are fed in the first years of life determines the likelihood of obesity in adulthood Without the development of low calorie foods little can be done Since health policy depends on individuals changing their behaviour they need to understand how to control their weight Ambitious in scope the author deals with the topic in an eye catching and easy to understand manner illustrated with colourful analogies and unusual and amusing facts A refreshing novel perspective is offered that will be of interest to everyone wishing to control their body weight
