Human Paleobiology Robert B. Eckhardt, 2000-09-28 Human Paleobiology provides a unifying framework for the study of human populations both past and present to a range of changing environments It integrates evidence from studies of human adaptability comparative primatology and molecular genetics to document consistent measures of genetic distance between subspecies species and

other taxonomic groupings These findings support the interpretation of the biology of humans in terms of a smaller number of populations characterised by higher levels of genetic continuity than previously hypothesised Using this as a basis Robert Eckhardt then goes on to analyse problems in human paleobiology including phenotypic differentiation patterns of species range expansion and phyletic succession in terms of the patterns and processes still observable in extant populations This book will be a challenging and stimulating read for students and researchers interested in human paleobiology or evolutionary anthropology The Puzzle of the Western Zodiac: Its Wisdom and Evolutionary Leaps Alex A.

Gurshtein, 2017-12-29 Though familiar to all the twelve strong Western Zodiac remains an enigmatic artifice of the archaic past To date no scholar has been able to determine who conjured up its constellations and when this might have happened Nor do we know what the grand design behind this innovative endeavor might have been This book however goes a long way towards answering those questions by combining together a variety of clues from multiple disciplines including astronomy archaeology and linguistics It provides a comprehensive framework that greatly expands our understanding of the genesis and purposes of this remarkable intellectual relic of our cultural heritage The books overarching outcome that the zodiacal necklace in the sky appeared gradually over time in three different stages with each reflecting the immanent social and spiritual concerns of its time provides a fundamental impact to reconsider our understanding of prehistory No special knowledge is necessary to understand this captivating writing The First Ethiopians Malvern van Wyk Smith, 2009-07-01 The First Ethiopians explores the images of Africa and Africans that evolved in ancient Egypt in classical Greece and imperial Rome in the early Mediterranean world and in the early domains of Christianity Inspired by curiosity regarding the origins of racism in southern Africa Malvern van Wyk Smith consulted a wide range of sources from rock art to classical travel writing from the pre Dynastic African beginnings of Egyptian and Nubian civilisations to Greek and Roman perceptions of Africa from Khoisan cultural expressions to early Christian conceptions of Africa and its people as demonic from Aristotelian climatology to medieval cartography and from the geo linguistic history of Africa to the most recent revelations regarding the genome profile of the continent s peoples His research led to a startling proposition Western racism has its roots in Africa itself notably in late New Kingdom Egypt as its ruling elites sought to distance Egyptian civilisation from its African origins Kushite Nubians founders of Napata and Mero who in the eighth century BCE furnished the black rulers of the twenty fifth Dynasty in Egypt adopted and adapted such Dynastic discriminations in order to differentiate their own superior Meroitic civilisation from the world of other Ethiopians In due course archaic Greeks who began to arrive in the Nile Delta in the seventh century BCE internalised these distinctions in terms of Homer s identification of two Ethiopias an eastern and a western to create a racialised and racist discourse of worthy and savage Ethiopians Such conceptions would inspire virtually all subsequent Roman and early medieval thinking about Africa and Africans and become foundational in European thought The book concludes with a survey of the special place that Aksumite Ethiopia later Abyssinia has held in both European and African

conceptual worlds as the site of worthy Ethiopia as well as in the wider context of discourses of ethnicity and race

The Routledge Handbook of Archaeology and Globalization Tamar Hodos, 2016-11-18 This unique collection applies globalization concepts to the discipline of archaeology using a wide range of global case studies from a group of international specialists The volume spans from as early as 10 000 cal BP to the modern era analysing the relationship between material culture complex connectivities between communities and groups and cultural change Each contributor considers globalization ideas explicitly to explore the socio cultural connectivities of the past In considering social practices shared between different historic groups and also the expression of their respective identities the papers in this volume illustrate the potential of globalization thinking to bridge the local and global in material culture analysis The *Routledge Handbook of Archaeology and Globalization* is the first such volume to take a world archaeology approach on a multi period basis in order to bring together the scope of evidence for the significance of material culture in the processes of globalization This work thus also provides a means to understand how material culture can be used to assess the impact of global engagement in our contemporary world As such it will appeal to archaeologists and historians as well as social science researchers interested in the origins of globalization
