Economics as Social Science Roberto Marchionatti, Mario

Cedrini, 2016-10-14 There is a growing consensus in social sciences that there is a need for interdisciplinary research on the complexity of human behavior At an age of crisis for both the economy and economic theory economics is called upon to fruitfully cooperate with contiguous social disciplines The term economics imperialism refers to the expansion of economics to territories that lie outside the traditional domain of the discipline Its critics argue that in starting with the assumption of maximizing behaviour economics excludes the nuances of rival disciplines and has problems in interpreting real world phenomena This book focuses on a territory that persists to be largely intractable using the postulates of economics that of primitive societies In retracing the origins of economics imperialism back to the birth of the discipline this volume argues that it offers a reductionist interpretation that is poor in interpretative power By engaging with the neglected traditions of sociological and anthropological studies the analysis offers suggestions for a more democratic cooperation between the social sciences Economics as Social Science is of great interest to those who study history of economic thought political economy and the history of economic anthropology as well as history of social sciences and economic methodology

The Idea of History in Constructing Economics Michael H. Turk, 2015-08-11 How scientific is economics This question has often been framed by analogies and correspondences made between economics and other seemingly more well established scientific disciplines starting with classical mechanics At the same time economics is likely to be seen in opposition to or in contrast with history where the reliance upon generalizing rules thought experiments and model construction in economics is set against the amassing of particular facts intended to create narratives in history In this new volume Turk explores the relationship between economics and history including the often fraught one between economics and economic history making the case that economics does in fact require the proper grounding in history that has so often been ignored This work challenges the attempt to link economics with other more clearly scientific disciplines as flawed and fundamentally wrongheaded A key element of this book is its examination of the gaps and associations that exist in or are seen through linkages with thermodynamics classical mechanics biology literature mathematics philosophy and sociology This exploration is frequently undertaken through study of the work of one or more major figures in the history of economic thought ranging from Quesnay and Smith through Walras and Max Weber to Robinson Krugman David and Arthur Through the possibility of

an alternative to the gaps noted in each such comparison the underlying necessary connection between economics and history can be brought out The book concludes by exploring the basis for the positive construction of a historical economics This book is suited for those who study history of economic thought and philosophy of economics *Universities and Sustainable Communities: Meeting the Goals of the Agenda 2030* Walter Leal Filho, Ubiratã Tortato, Fernanda Frankenberger, 2019-09-25 The book showcases examples of university engagement in community initiatives and reports on the results from research and from a variety of institutional projects and programmes As a whole the book illustrates how actors at the community microlevel and other levels meso and macro can make valuable and concrete contributions to the implementation of the Sustainable Development Goals SDGs and more specifically to achieving the objectives defined at the 2030 Agenda for Sustainable Development It is one of the outcomes of the Second World Symposium on Sustainability Science which was jointly organised by the Pontifícia Universidade Católica do Paraná Brazil the Research and Transfer Centre Sustainable Development and Climate Change Management and the European School of Sustainability Science and Research at Hamburg University of Applied Sciences Germany in cooperation with the Inter University Sustainable Development Research Programme IUSDRP *New Perspectives on Structural Change* Ludovico Alcorta, Neil Foster-McGregor, Adam Szirmai, Bart Verspagen, 2021 A comprehensive edited volume that outlines the historical roots and state of the art debates on the role of structural change in the process of economic development including both orthodox and heterodox perspectives and contributions from prominent scholars in this field **Singapore** International Monetary Fund. Asia and Pacific Dept, 2015-07-24 External trade plays an important role in Singapore's economy providing an important share of total value added Singapore's exports have a relatively large import share however they also have a high level of complexity As emphasized in previous studies value added in exports plays an important role in trade elasticities The paper finds evidence that this is indeed the case for Singapore's export products Products that have higher domestic value added share also tend to have higher export price elasticity Economic complexity is also related to export price elasticities higher economic complexity is associated with lower price elasticity of exports This relationship is stronger within certain product segments such as the machinery mechanical appliances and computers as well as the pharmaceuticals segments Trade elasticities are important to understand Singapore's exchange rate based monetary policy transmission Exchange rate changes can affect profits and trade volumes differently depending upon the price pass through to import and export prices and the price elasticity of exports and imports The import and export price pass through can in return depend on trade elasticities The paper also shows that there is important product heterogeneity with respect to trade elasticities both across different product groups but also within individual product groups This implies that structural changes in the product composition of trade can lead to sizeable changes in Singapore's trade elasticities *New Challenges to Philosophy of Science* Hanne Andersen, Dennis Dieks, Wenceslao J. Gonzalez, Thomas Uebel, Gregory Wheeler, 2013-05-28 This volume is a serious attempt

to open up the subject of European philosophy of science to real thought and provide the structural basis for the interdisciplinary development of its specialist fields but also to provoke reflection on the idea of European philosophy of science This efforts should foster a contemporaneous reflection on what might be meant by philosophy of science in Europe and European philosophy of science and how in fact awareness of it could assist philosophers interpret and motivate their research through a stronger collective identity The overarching aim is to set the background for a collaborative project organising systematising and ultimately forging an identity for European philosophy of science by creating research structures and developing research networks across Europe to promote its development

Revisiting the Link between Trade, Growth and Inequality Ms.Kimberly Beaton,Aliona Cebotari,Andras Komaromi,2017-03-09 We revisit the relationship between international trade economic growth and inequality with a focus on Latin America and the Caribbean The paper combines two approaches First we employ a cross country panel framework to analyze the macroeconomic effects of international trade on economic growth and inequality considering the strength of trade connections as well as characteristics of countries export markets and products Second we consider event studies of past episodes of trade liberalization to extract general lessons on the impact of trade liberalization on economic growth and its structure and inequality Both approaches consistently point to two broad messages First trade openness and connectivity to the center of the trade network has substantial macroeconomic benefits Second we do not find a statistically significant or economically sizable direct impact of trade on overall income inequality
