With its inception in the late 20th century, the mobile phone was a bulky, expensive device limited to making and receiving calls. The fourth generation (4G) elevated the speed and quality of wireless communications, paving the way for high-definition mobile TV, video conferencing, and advanced gaming. Currently, the fifth generation (5G) promises unprecedented speeds, reduced latency, and the capacity to connect a vast network of devices, heralding a new era of innovation and connectivity.
