Using Graphing Skills

Introduction

Recorded data can be plotted on a graph. A graph is a pictorial representation of information recorded in a data table. It is used to show a relationship between two or more different factors. Two common types of graphs are line graphs and bar graphs.

In this investigation, you will interpret and construct a bar graph and a line graph.

Problem

How do you correctly interpret and construct a line graph and a bar graph?

Pre-Lab Discussion

Read the entire investigation. Then, work with a partner to answer the following questions.

1. Would a line graph or a bar graph be better for showing the number of birds of each color in a population?

bar graph

2. How could you plot more than one responding variable on a line graph?

you can make different types of lines

3. Where do you place the manipulated variable on a line graph?

Independent variable and you put it on the x-axis.

4. Which type of graph would you use to show comparisons? Explain the reason for your answer.

bar graph because of its visual

5. Why is it important to have all parts of a graph clearly labeled and drawn?

so you can gather your data and be more organized. It helps you understand more.

Part A. Interpreting Graphs

1. The type of graph that best shows the relationship between two variables is the line graph. A line graph has one or more lines connecting a series of points. See Figure 1. Along the horizontal axis, or x-axis, you will find the manipulated variable in the experiment. Along the vertical axis or y-axis, you will find the responding variable.
