Redefining Education and Development Kaitano Dube, 2024-10-18 The book aligns with the United Nations Sustainable Development Goals SDGs particularly Goal 4 which focuses on quality education It explores the evolving role of education as a critical driver for achieving all 17 SDGs by

providing a platform for discussing innovative educational models and theories that foster sustainable development The book takes an interdisciplinary approach merging educational theory developmental practice and human psychology to address complex global challenges hindering sustainable development The book includes case studies and empirical research such as exploring student entrepreneurship in the agricultural sector and the factors bridging the gap between entrepreneurial intention and venture creation These examples provide readers with practical applications of theoretical concepts and demonstrate the real world impact of educational innovations which is at the core of education delivery for all and how education touches on other areas of the SDGs The book offers valuable insights for policymakers educators and development practitioners by presenting research and theory based analyses It suggests ways to improve the academic environment to foster entrepreneurship and innovation which are key to economic development and job creation especially in regions with high youth unemployment rates The content suggests educational reforms that are responsive to the changing societal and economic landscapes The book's blend of theory and practice targets a broad audience including academic scholars students development agencies non governmental organisations and policymakers It seeks to engage these diverse readers in a conversation about the future of education and its role in achieving sustainable development In summary the book seeks to provide a comprehensive exploration of the nexus between education development and human needs in the context of the SDGs offering innovative perspectives and practical solutions to equip readers to contribute to sustainable global development

Acid Mine Drainage and its Governance in the Gauteng City-Region Kerry Bobbins, 2015-05-29 Acid mine drainage AMD has generated an enormous amount of media interest and public concern in the Gauteng City Region GCR over the last decade However it has been framed as a narrow technical concern with government action being directed towards securing the necessary engineering and processing solutions as quickly as possible to prevent decant and treat acid mine water to industrial standards This has arguably limited the scope for full discussion and debate on the impacts of AMD particularly for the environment and this bears implications for how AMD has been managed in the GCR Government's immediate short and long term interventions to address AMD have been set out as a straight forward solution but over time more complex environmental concerns have emerged Becoming more evident over the last few years is that one of the main impacts of AMD will be its effect on the overall water security in the Vaal River System VRS on which the GCR relies for its supply of potable water Limits on water abstraction from the VRS together with the increasing need to maintain the overall water quality in the system through dilution and treatment activities means that AMD is beginning to manifest as a binding constraint on economic development and a burden on society in particular via escalating costs for water consumers Fiscal constraints are likely to see GCR residents and businesses pick up more and more of the costs associated with the treatment of AMD through the format of increased municipal tariffs With final decisions on municipal tariffs now pending the broader yet invisible impacts of AMD loom large This means that the debate has moved far beyond the issue of predicted decant in

each of the Witwatersrand's mining basins Water security for the GCR and who will carry the costs associated with the long term treatment of AMD have instead taken centre stage This paper carefully updates the historical record on AMD since the publishing of a GCRO Provocation on the issue in 2010 In doing so it argues that the way in which AMD has been governed raises a flag around how the political economy of an issue such as AMD should be understood publicly debated and managed In particular it suggests that the governance of an environmental challenge such as AMD is not only about finding a technical solution The lack of platforms to ensure well informed public deliberation especially over such issues as who will pay and how must be addressed to ensure more equitable and transparent decision making In light of the broader mine waste legacy inherited by the GCR and the strong likelihood of environmental contamination becoming more commonplace in the future these concerns are not only limited to AMD They will only grow in importance over time

South Africa's water governance hydraulic mission (1912-2008) in a WEF-Nexus context Johann W.N. Tempelhoff, 2018-12-01 Geologists physicists and ecologists currently promote the idea of a post Holocene epoch the Anthropocene As a result of constant innovation and modernisation in the fields of engineering natural science management

studies and environmental studies there has been a growing awareness of the intrinsic interaction between humankind and the environment. Humankind has become part of the environmental dynamics to the extent that they are literally able to change ecosystems. Nowhere is the impact more evident than in the anthropogenic engagement with the hydrosphere from the smallest pool of water to the earth's atmosphere. Comprehensive infrastructure development in water and sanitation, the growing trend to seek additional resources in the form of groundwater, desalinated seawater and recycled wastewater as well as special attention being given to capturing and preserving rainwater bear evidence of a timely response to climate change. Population growth and rapid development in many water stressed regions of the world. The purpose of the book is to provide a historical overview of the manner in which South Africa's water resources have been governed from a time when the Union of South Africa was formed in 1910 up to 2008, a time of a growing global awareness of the potential impact that climate change may have on water resources in a key region of southern Africa notable for increasing levels of aridity and more erratic rainfall patterns. This focus on the history of water affairs in South Africa makes it possible for scholars to comprehend the contemporary transitions made in the country's water governance system since the establishment in 2014 of the Department of Water and Sanitation. The focus is on the Water-Energy-Food nexus, a strategy which holistically contemplates the governance and use of water from the perspective of the interconnection between water, energy and food as resources.

Digital Leadership for Sustainable Higher Education Saad, Wan Zuhainis, Alias, Nor Aziah, Chong, Chou Min, Sabri, Suriana, 2025-06-04. Higher Education management and academics are currently faced with the task of balancing a market and competition based education versus values based education as people trudge through the Anthropocene era when humans have a substantial impact on the planet. The holistic and comprehensive nature of higher education that aims to instill a range of ethical, moral and social values in students is paramount. The graduates that enter the workforce must unfailingly become responsible members of society and inadvertently contribute to the nation's prosperity and global harmony. Strong leadership and the agency to keep learning are unavoidable. Furthermore, the vast technological advances may drive practices that prioritize social responsibility, sustainability and well-being. Digital Leadership for Sustainable Higher Education presents key parameters for transforming higher education in response to the significant and unforeseen changes in the educational landscape. It explores the vast technological advances together with the complexities of the higher education ecosystem and proposes ways to uphold purpose-driven practices. Covering topics such as digital health, credentialing and nurturing empathy, this book is an excellent resource for educators, higher education leaders, technologists, sustainability experts, professionals, researchers, scholars, academicians and more.
