Valuation In Life Sciences:

Valuation in Life Sciences Boris Bogdan, Ralph Villiger, 2010-04-19 Valuation is a hot topic among life sciences professionals. There is no clear understanding on how to use the different valuation approaches and how to determine input parameters. Some do not value at all, arguing that it is not possible to get realistic and objective numbers out of it. Some claim it to be an art. In the following chapters we will provide the user with a concise valuation manual providing transparency and practical insight for all dealing with valuation in life sciences: project and portfolio managers, licensing executives, business developers, technology transfer managers, entrepreneurs, investors, and analysts. The purpose of the book is to explain how to apply discounted cash flow and real options valuation to life sciences projects: i.e. to license contracts, patents, and firms. We explain the fundamentals and the pitfalls with case studies so that the reader is capable of performing the valuations on his own and repeat the theory in the exercises and case studies. The book is structured in five parts. In the first part, the introduction, we discuss the role of the players in the life sciences industry and their particular interests. We describe why valuation is important to them, where they need it, and the current problems to it. The second part deals with the input parameters required for valuation in life sciences: i.e. success rates, costs, peak sales, and timelines. *Valuation in Life Sciences* Boris Bogdan, Ralph Villiger, 2008-03-29 This is the first complete guide to valuation in life sciences for industry professionals, investors, and academics. Boris Bogdan and Ralph Villiger introduce the characteristics of drug and medical device development, explain how to translate these into the valuation, and provide valuable industry data. Special emphasis is put on the practicability of the proposed methods by including many hands-on examples without compromising on realistic results. **Value Practices in the Life Sciences and Medicine** Isabelle Dussauge, Claes-Fredrik Helgesson, Francis Lee, 2015 This book provides a compelling scholarly statement about the interrelation and pliability of values in the life sciences, medicine, and health care. The volume aims to aid our understanding of the roles of power, knowledge production, and economic action in the heavily scientised and economised areas of life science and medicine. Valuation of Patents Alexander Wurzer, Dieter Reinhardt, 2012-04-25 Drawing on the full range of available resources, this book clearly and systematically presents a detailed overview of current knowledge about patent valuation. In the course of the presentation, the authors cover such elements of the subject as the following: business implications of the dematerialization of economic life; importance of intellectual property in a knowledge economy; forms of value creation by intangible assets in general and by patents in particular; value proposition of different ways of patent exploitation; patent value affecting environmental factors and factors inherent to the patent portfolio structure of current instruments of patent valuation. The authors provide a detailed step-by-step account of how to set up a valuation model with specifications of all the instruments required and attention to any empirical findings that have appeared. In addition, detailed case studies demonstrate the practical execution of major varieties of patent valuation; an appendix describes the mathematics used to compute present value and net value.

and a glossary defines technical terms In addition to its contribution to legal scholarship on patent law the book is unmatched as a procedural manual for setting up a valuation model before a concrete valuation task There is no clearer discussion of patent valuation as a crucial element of corporate strategy in the knowledge economy and as such the book will prove of great practical assistance to business managers and their counsel in any jurisdiction
