Vazirani Approximation Algorithms Solution Manual:

Invitation to Fixed-Parameter Algorithms Rolf Niedermeier, 2006-02-02 This research level text is an application oriented introduction to the growing and highly topical area of the development and analysis of efficient fixed parameter algorithms for optimally solving computationally hard combinatorial problems The book is divided into three parts a broad introduction that provides the general philosophy and motivation followed by coverage of algorithmic methods developed over the years in fixed parameter algorithmics forming the core of the book and a discussion of the essentials from parameterized hardness theory with a focus on W 1 hardness which parallels NP hardness then stating some relations to polynomial time approximation algorithms and finishing up with a list of selected case studies to show the wide range of applicability of the presented methodology Aimed at graduate and research mathematicians programmers algorithm designers and computer scientists the book introduces the basic techniques and results and provides a fresh view on this highly innovative field of algorithmic research

Approximation Algorithms for Traveling Salesman Problems Based on Linear Programming Relaxations Hyung Chan An, 2012 The traveling salesman problem TSP is the problem of finding a shortest Hamiltonian circuit or path in a given

weighted graph This problem has been studied in numerous variants and linear programming has played an important role in the design of approximation algorithms for these problems In this thesis we study two versions of the traveling salesman problem and present approximation algorithms for them based on the Held Karp relaxation We first investigate the s t path TSP Hoogeveen showed that the natural variant of Christofides algorithm is a $5/3$ approximation algorithm for this problem this asymptotically tight bound had remained the best approximation ratio known until now We surpass this 20 year old barrier by presenting a deterministic 1.5 approximation algorithm for the s t path TSP for an arbitrary metric The techniques devised in this context can also be applied to other optimization problems including the prize collecting s t path problem and the unit weight graphical metric s t path TSP The integrality gaps of the LP relaxations for all three problems are studied Then we consider the bottleneck asymmetric TSP where the objective is minimizing the bottleneck or maximum length edge cost rather than the total edge cost We present the first nontrivial approximation algorithm for this problem by giving a novel algorithmic technique to shortcut Eulerian circuits while bounding the lengths of the shortcuts needed Building on this framework and the result of Asadpour Goemans Madry Oveis Gharan and Saberi we achieve an $O(\log n \log \log n)$ approximation algorithm We also explore the possibility of improvement upon this result through a comparison to the symmetric counterpart of the problem
