Fromkin, Donca Steriade, Pamela Munro, Bruce Hayes, Susan Curtiss, Anna Szabolcsi, Tim Stowell, Edward Stabler, Dominique Sportiche, Hilda Koopman, Patricia Keating, Nina Hyams, 2001-08-22 *Linguistics An Introduction to Linguistic Theory* is a textbook written for introductory courses in linguistic theory for undergraduate linguistics majors and first year graduate students Twelve major figures in the field bring their expertise to each of the core areas of the field morphology syntax semantics phonetics phonology and language acquisition In each section the book is concerned with discussing the underlying principles common to all languages showing how these are revealed in language

acquisition and in the specific grammars of the world's languages. Theoretical concepts are introduced through the analysis of a wide set of language data from Arabic to Zulu. The student will learn how to do linguistics by working through real linguistic data. Each section explains how to define and solve a problem, organizes the data into paradigms revealing the structured patterns in the data, formulates generalizations based on these patterns, proposes rules or principles to account for the generalization, seeks independent evidence in its argument for the proposed theoretical construct. The book brings the latest developments in theoretical linguistics to bear in its discussion of the traditional issues. It covers these subjects in greater depth than is found in most introductory texts, permitting the student to proceed directly after using this text to graduate courses in the field. It contains problems, a glossary, and a bibliography for further reading. Linguistics is supported by an instructor's manual.
