This book is based on the author's 33 years of intensive fieldwork. It chronicles a major movement that shaped the preservation policy in Japan in the 1980s and 1990s, providing thick descriptions of preservationists that are not available anywhere else in English. It also provides clear answers to a series of pressing questions: about preservationists, are they building huggers, are they selfish and myopic, home owners, or are they merely obstacles to urban planning and urban renewal. Since 1984, Saburo Horikawa, Professor of Sociology at Hosei University in Tokyo, has continuously studied the movement to preserve the Otaru Canal in Otaru, Japan. This book shows that the preservation movement was neither conservative nor an obstacle. Rather, the movement sought to promote changes in which the residents' place would continue to be theirs. As such, the word preservation does not mean the prevention of growth and development but rather its control. As is shown in this study, preservation allows for and can even promote change. The original Japanese version of this book, published by the University of Tokyo Press, has won 3 major academic awards, most notably The Ishikawa Prize, the highest award bestowed by the City Planning Institute of Japan. It is extremely unusual that a sociology book should receive such important recognition from the city planning discipline.

The Intersection of Economics and Ecology Gurudas Nulkar, 2024-11-25 p. This book is a machine-generated literature overview highlighting the importance of natural capital while studying the economics of ecology. It puts together available literature on this theme, exploring it through the lens of sustainable development. While the main content is machine-generated, each chapter contains curated published content, an overview, and an introduction by the editor highlighting important areas and literature gaps, describing the connection of the topic with human economy and examples of negative externalities. The topics seek out research articles that show a connection with mainstream economy or rural livelihoods. The connection between natural capital and human economy is well known, but many of these negative externalities are complex problems to solve. While there is a growing awareness to capture the value of natural capital in economic decision making, there is no universal consensus. However, assessing the economic value of natural resources and ecosystem services and integrating this information into decision-making processes such as cost-benefit analysis, corporate reporting, and government policy making holds a promise of finding long-term solutions to these market failures. By valuing natural capital, decision makers can better understand the economic benefits and costs of different activities and policies and make more informed choices that balance economic, social, and environmental objectives. Containing important introductions by the human editor to plug gaps in literature, the book is a great resource for policy makers, students of economics and sustainable development, non-governmental organisations working in this field, and corporate managers who are responsible for allotting budgets towards corporate social responsibility programs.
