

Conditional Statements

Traffic Lighting

```
cellstyle exp1 as and=classn(ayb=arthen);
exp2 as ayb=classn(ayb=arthen);
...
expn as ayb=classn(ayb=arthen);
```

The CELLSTYLE-AS statement is valid in both table and column definitions, although only one style is applied in a single data cell. Each expression is a WHERE expression that is evaluated for each data cell. If the result of the expression is true, the given style element and attributes are applied. Once a matching expression is found, execution stops.

Translating Values

```
translate exp1 to data exp2;
exp3 to data exp4;
...
expn to data expn;
```

The TRANSLATE-INTO statement is valid in both table and column definitions, although only one result is applied in a single data cell. Each expression is a WHERE expression. The (x) expressions are evaluated for each data cell. If the result of the (x) expression is true, the result of the (y) expression is used in place of the data value in the output. Once a matching expression is found, execution stops.

Expression Variables

<code>_col</code>	current column number
<code>dataname</code>	name of the current data column
<code>label</code>	label on the current data column
<code>row</code>	current row number

        text "Height/Weight";
        align = "r";
      end;
      header = heightweight;
    end;

    define bmi;
      notes "Compute BMI (Body Mass Index)";

PROC TEMPLATE Tables Tip Sheet

This tip sheet places frequently used information in one place, on one sheet of paper, so you don't have to search through the online documentation. It also gives you something to take home, type in, and try.

The PROC TEMPLATE table family (e.g., table, column, header, and footer templates) allows you to build custom tables for your reports. Using table templates, you can create tables that display only the data you want to see, you can format the data using SAS[®] formats, you can add headers and footers to tables and columns, and you can use conditional formatting to enhance the readability of the data in your tables. This tip sheet presents the most common statements and attributes used in creating tables with PROC TEMPLATE.

PROC REPORT by Example Lisa Fine, 2013-12-20 *PROC REPORT by Example Techniques for Building Professional Reports Using SAS* provides real world examples using PROC REPORT to create a wide variety of professional reports. Written from the point of view of the programmer who produces the reports, this book explains and illustrates creative techniques used to achieve the desired results. Each chapter focuses on a different concrete example, shows an image of the final report, and then takes you through the process of creating that report. You will be able to break each report down to find out how it was produced, including any data manipulation you have to do. The book clarifies solutions to common everyday programming challenges and typical daily tasks that programmers encounter. For example, obtaining desired report formats using style templates supplied by SAS and PROC TEMPLATE PROC REPORT STYLE options and COMPUTE block features, employing different usage options, DISPLAY ORDER GROUP ANALYSIS COMPUTED to create a variety of detail and summary reports using BREAK statements and COMPUTE blocks to summarize and report key findings, producing reports in various Output Delivery System ODS destinations including RTF PDF XML TAGSETS RTF, embedding images in a report, and combining graphical and tabular data with SAS 9.2 and beyond. Applicable to SAS users from all disciplines, the real life scenarios will help elevate your reporting skills learned from other books to the next level. With *PROC REPORT by Example Techniques for Building Professional Reports Using SAS*, what seemed complex will become a matter of practice. This book is part of the SAS Press program.

Marasinghe, William J. Kennedy, 2008-12-10 This book is intended for use as the textbook in a second course in applied statistics that covers topics in multiple regression and analysis of variance at an intermediate level Generally students enrolled in such courses are primarily graduate majors or advanced undergraduate students from a variety of disciplines These students typically have taken an introductory level statistical methods course that requires the use a software system such as SAS for performing statistical analysis Thus students are expected to have an understanding of basic

concepts of statistical inference such as estimation and hypothesis testing Understandably adequate time is not available in a first course in statistical methods to cover the use of a software system adequately in the amount of time available for instruction The aim of this book is to teach how to use the SAS system for data analysis The SAS language is introduced at a level of sophistication not found in most introductory SAS books Important features such as SAS data step programming pointers and line hold specifiers are described in detail The powerful graphics support available in SAS is emphasized throughout and many worked SAS program examples contain graphic components
