works by Thomas Pynchon Doris Lessing and others who incorporate science in fiction and exemplify the movement of mainstream fiction writers toward a new genre termed *span*. It also examines works by some science fiction writers who are edging closer to the border of science fiction and slowly over into *span*. This book maps the boundaries of the new *span* genre of fiction and thus helps define texts that fall outside the realms of mainstream and science fiction. Farooq, Erica Fretwell, Nicholas Gaskill, Patrick Jagoda, Erin Gentry Lamb, Jennifer Rhee, Britt Rusert, Matthew A. Taylor, Aarthi Vadde, Priscilla Wald, Rebecca Walsh, 2020-11-26 This handbook illustrates the evolution of literature and science in collaboration and contestation across the twentieth and twenty-first centuries. The essays it gathers question the charged rhetoric that pits science against the humanities while also demonstrating the ways in which the convergence of literary and scientific approaches strengthens cultural analyses of colonialism, race, sex, labor, state formation and environmental destruction. The broad scope of this collection explores the shifting relations between literature and science that have shaped our own cultural moment sometimes in ways that create a problematic hierarchy of knowledge and other times in ways that encourage fruitful interdisciplinary investigations, innovative modes of knowledge production and politically charged calls for social justice. Across units focused on epistemologies, techniques and methods, ethics and politics and forms and genres, the chapters address problems ranging across epidemiology and global health, genomics and biotechnology, environmental and energy sciences, behaviorism and psychology, physics and computational and surveillance technologies.
