The Theory of Plane Area at the Crossroads Eduardo N. Giovannini,Edward Hermann Haeusler,Abel Lassalle Casanave,2025-01-02 This book explores a cluster of philosophical historical and logical problems concerning the foundations of the theory of plane area in elementary geometry The motivation of this study is a notable geometrical proposition known as De Zolt's postulate which asserts that a polygon cannot be equal in area to a proper polygonal part The book is the first systematic investigation of the philosophical and foundational significance of this proposition which can also be described as the fundamental theorem of the theory of plane area This volume provides a comparative study of Euclid's development of the theory of area in the Elements and its modern reinterpretation in Hilbert's classical monograph Foundations of Geometry It connects the historical reflections on De Zolt's postulate with the nineteenth century program of providing a purely geometrical foundation for Euclidean geometry uncovering a rich array of intertwined conceptual problems It also shifts the perspective and provides a logical analysis of this geometrical postulate within an original development of the abstract theory of magnitudes called compatible magnitudes Finally it extends the previous formal treatment of De Zolt's postulate to the case of three dimensional geometry by producing a type system for polyhedral geometrical mereology The innovative combination of philosophical historical and logical perspectives results in a novel discussion of a fascinating problem at the crossroads of late nineteenth century geometry This volume will interest readers in the fields of history and philosophy of mathematics logic and formal philosophy
