differences In the former Soviet Union psychological theory could not be advanced unconnected to Marxist Leninist ideology Accordingly theoretical formulations were subject to their own version of political correctness Books published in this field were addressed only to other scientists with backgrounds in the field Moreover the translation of the technical terms in Russian psychology frequently resist translation in the absence of the context of the debates in which they were being used Thus simple translation of books in this field as they were written in a specialized and politicized environment for Russian audiences is really not a particularly sensible or worthwhile undertaking This book is addressed in the first instance to Western psychologists It compares among other things analyses of work from the former Soviet Union with the work from the West Applications of activity theory to design and learning were paramount in the Soviet Union Using their own theoretical perspective the authors provide a comparative analysis of the various schools working in activity theory They hope that this book may facilitate the exchange of ideas between Russian psychological scientists and Western psychologists working in ergonomics human factors industrial organizational psychology education learning and related areas where the theory of activity may find general application This book s authors attempt to provide a contribution not only to science but also to history Western researchers have strongly influenced Russian work but because of negative political pressure in the former USSR the flow of concepts was one sided Russian ergonomists received so much from American and Western sources that it is now important to give something back Despite the considerable similarity between Russian and American theories and methods the special spin the former put on their work may stimulate new thinking on the part of their American colleagues
