Understanding The World of Energy 2.0 Myriam Maestroni, 2015-03-27 The start of the 21st century has marked an incredible change in the world of Energy In fact in a world which is more uncertain than ever sudden changes in energy prices shale and oil gas emergence of new players geopolitical tensions in Ukraine Iraq etc the only real issue in which there is a general consensus remains that of Energy Savings and Energy Efficiency This book aims to build a general picture of the world of modern energy by focusing on the major climatic and geopolitical challenges It also explores the most recent developments in environmental regulations notably those related to Energy Efficiency and Energy Savings seen without any doubt as the founding roots of the so called Energy Transition According to Myriam Maestroni a leading expert on Energy in France and Europe these two pillars of the New World of Energy 2.0 can be broken down at international European national and local levels not only because of the changes in the rules and the perceptions of policy makers regarding energy efficiency but also and especially because of the concrete ground level realities public entrepreneurial local or associative initiatives and technological innovations The book written in close cooperation with two top experts in the global energy world Michel Derdevet and Jean Marie Chevalier also records the opinions of some of the best French and international leading figures who are highly engaged to contribute through their proposals analysis and actions to the emergence of the new world of Energy 2.0 amongst which Bruno Lechevin Fatih Birol Johannes Meier Marc Beckers Ann Robinson Stephen Howard Juliet Davenport Gregor Paterson Jones Jean Marie Chevalier Robert Bell Mich le Sabban Corine Lepage Gabriele Albertini Jeremy Rifkin etc

Crossing the Energy Divide Robert U. Ayres, Edward H. Ayres, 2009-12-20 If we continue our highly inefficient dangerous energy usage we re headed for both economic and environmental catastrophe However the hard truth is that alternative fuels can t fully replace fossil fuels for decades What s more new research indicates that energy inefficiencies are retarding economic growth even more than most experts ever realized Crossing the Energy Divide is about solving all these problems at once The authors two leading experts in energy and environmental economics show how massive improvements in energy efficiency can bridge the global economy until clean renewables can fully replace fossil fuels Robert and Edward Ayres demonstrate how we can radically reform the way we manage our existing energy systems to double the amount of energy service we get from every drop of fossil fuel we use These techniques require no scientific breakthroughs Many companies and institutions are applying them right now but tens of thousands more could This book offers a strategic guide for using them to solve the energy crisis once and for all reducing carbon emissions achieving true energy security and reigniting economic growth for decades to come More energy without more emissions Recapturing lost energy from today s fossil fuels There is such a thing as a free lunch Mitigating climate disaster and improving prosperity at the same time The future of electricity Reforming tomorrow s electrical system smarter more productive and more reliable The implications for cities transportation business and government Making the decisions that prepare you for a high cost

risk and governance are intertwined in the development of the nuclear industry in India and its relationship with the Indian public It provides a rare insider view of how the nuclear establishment thinks about risk contrasted with public understandings of nuclear risk Energy Risk and Governance presents a nuanced picture of why nuclear energy is still considered by some as a rational choice This is in spite of its risks the ambiguities in both expert and public risk perceptions and the internal reflexivities that have emerged within the nuclear establishment as a result of the Fukushima Daiichi disaster that is absent from public discourse The insights in this book are not unique to India and similar observations can likely be made across the global nuclear industry Reflecting on what this means for risk governance in practice this book

proposes practical suggestions and some tools that practitioners in the nuclear industry can use in public engagement risk communication and deliberation at various stages of decision making **Electric Renewable Energy Systems** Muhammad H. Rashid, 2015-11-25 This derivative volume stemming from content included in our seminal Power Electronics Handbook takes its chapters related to renewables and establishes them at the core of a new volume dedicated to the increasingly pivotal and as yet under published intersection of Power Electronics and Alternative Energy While this re versioning provides a corollary revenue stream to better leverage our core handbook asset it does more than simply re package existing content Each chapter will be significantly updated and expanded by more than 50% and all new introductory and summary chapters will be added to contextualize and tie the volume together Therefore unlike traditional derivative volumes we will be able to offer new and updated material to the market and include this largely original content in our ScienceDirect Energy collection Due to the inherently multi disciplinary nature of renewables many engineers come from backgrounds in Physics Materials or Chemical Engineering and therefore do not have experience working in depth with electronics As more and more alternative and distributed energy systems require grid hook ups and on site storage a working knowledge of batteries inverters and other power electronics components becomes requisite Further as renewables enjoy broadening commercial implementation power electronics professionals are interested to learn of the challenges and strategies particular to applications in alternative energy This book will bring each group up to speed with the primary issues of importance at this technological node This content clarifies the juncture of two key coverage areas for our Energy portfolio alternative sources and power systems It serves to bridge the information in our power engineering and renewable energy lists supporting the growing grid cluster in the former and adding key information on practical implementation to the latter Provides a thorough overview of the key technologies methods and challenges for implementing power electronics in alternative energy systems for optimal power generation Includes hard to find information on how to apply converters inverters batteries controllers and more for stand alone and grid connected systems Covers wind and solar applications as well as ocean and geothermal energy hybrid systems and fuel cells
