

Installing Scripts

Installing an InDesign script is easy: put the script file in the Scripts Panel folder inside the Scripts folder in your InDesign application folder. (Create the Scripts folder if it does not already exist.)

Alternately, put the script inside the Scripts Panel folder in your user-preferences folder. Your user-preferences folder is at

Mac OS: `~/Library/Preferences/Adobe_InDesign/Version 3.0/Scripts/`
Windows XP: `~/Documents and Settings/user_name/Application Data/Adobe_InDesign/Version 3.0/Scripts/`

where `~` is your system volume and `user_name` is your user name.

Once the script is in the folder, it appears on the Scripts panel inside InDesign. To display the panel, choose **Window > Automation > Scripts**.

You also can put aliases/shortcuts to scripts (or to folders containing scripts) in the Scripts Panel folder, and they will appear in the Scripts panel.

To run a specific script when InDesign starts, put the script inside a folder named "Startup Scripts" inside the Scripts folder (create this folder if it does not already exist).

Running a Script

To run a script, display the Scripts panel (choose **Window > Automation > Scripts**), then double-click the script name in the Scripts panel. Many scripts display user-interface items (like dialog boxes or panels) and display alerts if necessary.

Using the Scripts Panel

The InDesign Scripts panel is the easiest and best way to run most InDesign scripts. If the panel is not already visible, you can display it by choosing **Window > Automation > Scripts**.

Scripts run from the Scripts panel run faster than scripts run from the Finder (Mac OS) or Explorer (Windows). To view the script actions as they execute, choose **Enable Redraw** from the Scripts panel menu.

The Scripts panel can run compiled or uncompiled AppleScripts (files with the file extension `.app`, `.aex`, or `.appleeventscript`), JavaScripts (files with the file extension `.js` or `.jsx`), VBScripts (files with the extension `.vbs`), or executable programs from the Scripts panel.

To edit a script shown in the Scripts panel, hold down Option (Mac OS) or Alt (Windows) key and double-click the script's name. This opens the script in the editor you defined for the script file type.

To open the folder containing a script shown in the Scripts panel, hold down the Command (Mac OS) or Ctrl-Shift (Windows) keys and double-click the script's name. Alternately, choose **Reveal in Finder** (Mac OS) or **Reveal in Explorer** (Windows) from the Scripts panel menu. The folder containing the script opens in the Finder (Mac OS) or Explorer (Windows).

Scripts run as a series of actions, which means you can undo the changes the script made to a document by choosing **Undo** from the Edit menu. This can help you troubleshoot a script, as you can step backward through each change.
