**Towards a Comparative Economic History of Cinema, 1930-1970** John Sedgwick, 2022-09-09 This book examines the economic circumstances in which films were produced distributed exhibited and consumed during the spoken era of film production until 1970 The periodisation covers the years between the onset of sound and the demise of the phased distribution of films Films are generally appreciated for their aesthetic qualities But they are also commodities This work of economic history presents a new approach considering consumption behaviour as significant as supply side decision making Audiences tastes are considered central with box office an indicator of what they liked The POPSTAT Index of Film Popularity is used as a proxy where box office knowledge is missing Comparative analysis is conducted through the tool RelPOP The book comprises original case studies covering film consumption in Great Britain the Netherlands Sweden and the United

States during the 1930s Australia and occupied Belgium during the Second World War and Italy the United States Poland and Czechoslovakia during the Post war An overriding theme is how the classical American business model which emerged during the 1910s linking production to distribution and exhibition adapted to local circumstances including the two countries behind the Iron Curtain during the years of High Stalinism      Content-Based Image Classification Rik Das,2020-12-17

Content Based Image Classification Efficient Machine Learning Using Robust Feature Extraction Techniques is a comprehensive guide to research with invaluable image data Social Science Research Network has revealed that 65% of people are visual learners Research data provided by Hyerle 2000 has clearly shown 90% of information in the human brain is visual Thus it is no wonder that visual information processing in the brain is 60 000 times faster than text based information 3M Corporation 2001 Recently we have witnessed a significant surge in conversing with images due to the popularity of social networking platforms The other reason for embracing usage of image data is the mass availability of high resolution cellphone cameras Wide usage of image data in diversified application areas including medical science media sports remote sensing and so on has spurred the need for further research in optimizing archival maintenance and retrieval of appropriate image content to leverage data driven decision making This book demonstrates several techniques of image processing to represent image data in a desired format for information identification It discusses the application of machine learning and deep learning for identifying and categorizing appropriate image data helpful in designing automated decision support systems The book offers comprehensive coverage of the most essential topics including Image feature extraction with novel handcrafted techniques traditional feature extraction Image feature extraction with automated techniques representation learning with CNNs Significance of fusion based approaches in enhancing classification accuracy MATLAB codes for implementing the techniques Use of the Open Access data mining tool WEKA for multiple tasks The book is intended for budding researchers technocrats engineering students and machine learning deep learning enthusiasts who are willing to start their computer vision journey with content based image recognition The readers will get a clear picture of the essentials for transforming the image data into valuable means for insight generation Readers will learn coding techniques necessary to propose novel mechanisms and disruptive approaches The WEKA guide provided is beneficial for those uncomfortable coding for machine learning algorithms The WEKA tool assists the learner in implementing machine learning algorithms with the click of a button Thus this book will be a stepping stone for your machine learning journey Please visit the author s website for any further guidance at <https://www.rikdas.com>      *Statistics, Data Mining, and Machine Learning in Astronomy* Željko Ivezić,Andrew J. Connolly,Jacob T. VanderPlas,Alexander Gray,2014-01-12 As telescopes detectors and computers grow ever more powerful the volume of data at the disposal of astronomers and astrophysicists will enter the petabyte domain providing accurate measurements for billions of celestial objects This book provides a comprehensive and accessible introduction to the cutting edge statistical methods needed to efficiently analyze complex data sets from

astronomical surveys such as the Panoramic Survey Telescope and Rapid Response System the Dark Energy Survey and the upcoming Large Synoptic Survey Telescope It serves as a practical handbook for graduate students and advanced undergraduates in physics and astronomy and as an indispensable reference for researchers Statistics Data Mining and Machine Learning in Astronomy presents a wealth of practical analysis problems evaluates techniques for solving them and explains how to use various approaches for different types and sizes of data sets For all applications described in the book Python code and example data sets are provided The supporting data sets have been carefully selected from contemporary astronomical surveys for example the Sloan Digital Sky Survey and are easy to download and use The accompanying Python code is publicly available well documented and follows uniform coding standards Together the data sets and code enable readers to reproduce all the figures and examples evaluate the methods and adapt them to their own fields of interest Describes the most useful statistical and data mining methods for extracting knowledge from huge and complex astronomical data sets Features real world data sets from contemporary astronomical surveys Uses a freely available Python codebase throughout Ideal for students and working astronomers
