Ford first started manufacturing Model Ts more than 100 years ago he didn't really have any sort of pickup or truck configuration in mind. However enterprising people and businesses were modifying those early chassis for commercial use and it didn't take long for Ford to figure out that there was a demand for a truck application of the Model T. Soon Ford was making its own configurations for commercial use first through third party body companies and eventually by Ford itself with the Model TT. From these humble beginnings Ford stumbled onto the basis for one of the most popular vehicles ever built the Ford F Series pickup truck. In *Ford F Series Trucks 1948 Present* authors Jimmy Dinsmore and James Halderman thoroughly dissect the history of Ford F Series pickup trucks as seen from a technical viewpoint. Fully covered are all the options, chassis specifications, running changes and the evolution of these trucks as they transformed from postwar utilitarian vehicles to the best selling luxury family cruisers seen today. Not only are Ford trucks the best selling trucks they are the best selling vehicle of any category cars included. This book will thrill truck aficionados and Ford historians alike as it covers the first F Series models 1948-1952 the ever popular second generation F Series models 1953-1956 the popular Bumpsides 1967-1972 and all the way through the remarkable technology of what is now the 14th generation of the F Series.

Technologies and Approaches to Reducing the Fuel Consumption of Medium- and Heavy-Duty Vehicles National Research Council, Transportation Research Board, Division on Engineering and Physical Sciences, Board on Energy and Environmental Systems, Committee to Assess Fuel Economy Technologies for Medium- and Heavy-Duty Vehicles, 2010-07-30. *Technologies and Approaches to Reducing the Fuel Consumption of Medium and Heavy Duty Vehicles* evaluates various technologies and methods that could improve the fuel economy of medium and heavy duty vehicles such as tractor trailers, transit buses and work trucks. The book also recommends approaches that federal agencies could use to regulate these vehicles' fuel consumption. Currently there are no fuel consumption standards for such vehicles which account for about 26 percent of the transportation fuel used in the U.S. The miles per gallon measure used to regulate the fuel economy of passenger cars is not appropriate for medium and heavy duty vehicles which are designed above all to carry loads efficiently. Instead any regulation of medium and heavy duty vehicles should use a metric that reflects the efficiency with which a vehicle moves goods or passengers such as gallons per ton mile, a unit that reflects the amount of fuel a vehicle would use to carry a ton of goods one mile. This is called load specific fuel consumption (LSFC). The book estimates the improvements that various technologies could achieve over the next decade in seven vehicle types. For example, using advanced diesel engines in tractor trailers could lower their fuel consumption by up to 20 percent by 2020 and improved aerodynamics could yield an 11 percent reduction. Hybrid powertrains could lower the fuel consumption of vehicles that stop frequently such as garbage trucks and transit buses by as much as 35 percent in the same time frame.
