*Reinterpreting the Keynesian Revolution* Robert Cord, 2013 Various explanations have been put forward as to why the Keynesian Revolution in economics in the 1930s and 1940s took place Some of these point to the temporal relevance of John Maynard Keynes's *The General Theory of Employment Interest and Money* 1936 appearing as it did just a handful of years after the onset of the

Great Depression whilst others highlight the importance of more anecdotal evidence such as Keynes's close relations with the Cambridge Circus a group of able young Cambridge economists who dissected and assisted Keynes in developing crucial ideas in the years leading up to the General Theory However no systematic effort has been made to bring together these and other factors to examine them from a sociology of science perspective This book fills this gap by taking its cue from a well established tradition of work from history of science studies devoted to identifying the intellectual technical institutional psychological and financial factors which help to explain why certain research schools are successful and why others fail This approach it turns out provides a coherent account of why the revolution in macroeconomics was Keynesian and why on a related note Keynes was able to see off contemporary competitor theorists notably Friedrich von Hayek and Michal Kalecki

English The chapters explore dominant ideas and historiographical trends and open them up to critical transnational perspectives This volume is essential reading for both academics and students in economic and social history As this field of study is very much a bridge between the social sciences and humanities the issues examined in the book will also have relevance for those seeking to understand the evolution of other academic disciplines under the pressures of varied economic political and cultural circumstances on both national and global scales *New Developments in Pathways Towards Diversity and Inclusion in STEM: A United States Perspective* Alexander Gates, Juan Gilbert, Chris Botanga, Kim Nguyen, Bonita London, 2022-10-17 The Louis Stokes Alliances for Minority Participation LSAMP program of the US National Science Foundation has been a primary force for raising the success and graduation of minority students in STEM for 30 years Increasing the number of underrepresented students earning baccalaureate degrees and entering graduate school in STEM is the goal of LSAMP This goal has been nearly achieved through the formation of alliances of degree granting institutions of higher learning varying from community colleges to major research institutions Currently there are 59 alliances including more than 400 institutions LSAMP is responsible for more than 650 000 bachelor s degrees earned by minority students in STEM The papers for this Research Topic should focus on the use of LSAMP activities programs and collaborations to develop pathways to success and graduation of STEM majors from minority groups that underrepresented in STEM These pathways can include any segment from pre college through graduate school Areas of special interest include mentoring research experiences transitions between levels and novel approaches for retention The studies should be research based and rigorous They can be pure research studies curriculum and design or literature reviews but they must be at a cutting edge level and be subject to detailed review and assessment
