

Twin-Scroll Turbocharger.

The larger channel directs one exhaust stream to the outer edge of the turbine blades,

causing the turbocharger to spin faster.

The smaller channel directs the other exhaust stream to the inner surfaces of the turbine blades.

This improves turbocharger response.

Twin-scroll technology combines optimal low-end response with excellent top-end power increase.

The exhaust streams from the two pairs of cylinders are routed to the turbine via separate spiral-shaped channels of differing diameter.
