## **Turner Report On Climate Change:**

Australia's Biodiversity and Climate Change Will Steffen, Andrew A. Burbidge, Lesley Hughes, Roger Kitching, David Lindenmayer, Warren Musgrave, Mark Stafford Smith, Patricia A. Werner, 2009 Australia's unique biodiversity is under threat from a rapidly changing climate. The effects of climate change are already discernible at all levels of biodiversity: genes, species, communities and ecosystems. Many of Australia's most valued and iconic natural areas, the Great Barrier Reef, south-western Australia, the Kakadu wetlands and the Australian Alps, are among the most vulnerable. But much more is at stake than saving iconic species or ecosystems. Australia's biodiversity is fundamental to the country's national identity, economy and quality of life. In the face of uncertainty about specific climate scenarios, ecological and management principles provide a sound basis for maximising opportunities for species to adapt, communities to reorganise and ecosystems to transform while maintaining basic functions critical to human society. This innovative approach to biodiversity conservation under a changing climate leads to new challenges for management, policy development and institutional design. This book explores these challenges, building on a detailed analysis of the interactions between a changing climate and Australia's rich but threatened biodiversity. Australia's Biodiversity and Climate Change is an important reference for policy makers, researchers, educators, students, journalists, environmental and conservation NGOs, NRM managers and private landholders with an interest in biodiversity conservation in a rapidly changing world. Publisher: *Climate Change Challenges and Opportunities in Latin America and the Caribbean* Anna Ivanova, Ms. Julie A. Kozack, Ms. Sònia Muñoz, 2024-07-19 The analysis in the book suggests that LAC countries are facing substantial challenges related to climate change but have tools at their disposal to seize the opportunities that the climate change presents. To maximize opportunities and minimize the risks, LAC countries will need to improve flexibility and adaptability of their economies. Policies aimed at supporting the reallocation of labor and capital across sectors, investing in basic skills and human capital, improving transparency and economic governance to encourage investment in technology and know-how, and creating fiscal space to manage the climate transition would help LAC countries position themselves to take advantage of the opportunities afforded by the climate transition. **Integrated Regional Assessment of Global Climate Change**, **An Introduction to the Green Economy** Adrian C. Newton, Elena Cantarello, 2014-08-13 The green economy is widely seen as a potential solution to current global economic and environmental crises and a potential mechanism by which sustainable development might be achieved in practice. Considerable investments are now being made into the development of green technology, renewable energy, biodiversity conservation, resource efficiency, recycling of materials and green infrastructure. This textbook provides a comprehensive introduction to the green economy using a strongly interdisciplinary approach based on environmental science rather than treating it as a sub-set of economics. The scientific principles of sustainability are presented, which provide the foundations of the green economy, with a particular focus on systems-based approaches. Examples of real-world case studies are used to

illustrate how the green economy can be achieved in practice In this way the authors provide a thorough overview of both the principles and practice of the green economy drawing from a wide range of disciplines including ecology geography social science psychology sustainability science environmental science law and economics The emphasis is on presenting results of the latest research derived from leading scientific journals Rather than focusing on a single definition of what constitutes a green economy the book introduces readers to the diversity of opinion that exists and engages them in what is an active on going debate This reflects the fact that many aspects of the green economy and sustainable development more generally are currently contested In particular the book will help readers to strengthen their ability to critically evaluate the evidence for and against the views presented and to actively contribute to the future development of the green economy **Reporting**

**Climate Change in the Global North and South** Jahnnabi Das,2019-08-29 This book reveals how journalists in the Global North and Global South mediate climate change by examining journalism and reporting in Australia and Bangladesh This dual analysis presents a unique opportunity to examine the impacts of media and communication in two contrasting countries in terms of economy income and population size which both face serious climate change challenges In reporting on these challenges journalism as a political institutional and cultural practice has a significant role to play It is influential in building public knowledge and contributes to knowledge production and dialogue however the question of who gets to speak and who doesn't is a significant determinant of journalists capacity to establish authority and assign cultural meaning to realities By measuring the visibility from presences and absences the book explores the extent to which the influences are similar or different in the two countries contrasting how journalists communication power conditions public thought on climate change The investigation of climate communication across the North South divide is especially urgent given the global commitment to reduce greenhouse gas emissions and it is critical we gain a fuller understanding of the dynamics of climate communication in low emitting low income countries as much as in the high emitters high income countries This book contributes to this understanding and highlights the value of a dual analysis in being able to draw out parallels as well as divergences which will directly assist in developing cross national strategies to help address the mounting challenge of climate change This book will be of great interest to students and scholars of climate change and environmental journalism as well as media and communication studies more broadly **Excavations at Nichoria in Southwest Greece** , **Climate**

**Crisis Economics** Stuart P. M. Mackintosh,2021-08-31 Climate Crisis Economics draws on economics political economy scientific literature and data to gauge the extent to which our various communities political economic business are making the essential leap to a new narrative and policy approach that will accelerate us towards the necessary transition to a decarbonized economy and sustainable future The book draws out policies and practices with both national and local examples which will demonstrate various complementary approaches that are empowering states and people as they seek to pursue the carbon neutral goal The author delineates a climate crisis economics approach that is fit for purpose and which

can help achieve necessary climate change goals in the decades ahead Ensuring economic and ecological sustainability is neither easy nor cost free there is no single solution to the climate crisis All aspects of our economies policies business and personal practices must come into alignment in order to succeed Frustratingly we know what is needed and we have many of the technologies and systems to make the leap to a carbon neutral economy yet we still fail to act with alacrity Leaders communities and businesses must shift their narratives in how they talk about and think about the climate crisis In doing so in making the narrative leap to a new understanding about what is possible and necessary we can stop endangering our common future and single fragile global habitat and instead set the stage for Green Globalisation 2 0 and a new sustainable industrial revolution Climate Crisis Economics will appeal to academics students investors and professionals from varying disciplines including politics international political economy and international economics Written in an accessible voice it draws on work in fields outside of and in addition to politics and economics to make a case for climate crisis economics as an approach to addressing the climate change challenge ahead The Open Access version of this book available at [www.taylorfrancis.com](http://www.taylorfrancis.com) has been made available under a Creative Commons Attribution Non Commercial No Derivatives 4 0 license Thanks to the support of libraries working with Knowledge Unlatched [www.knowledgeunlatched.org](http://www.knowledgeunlatched.org)

**Polanyi in times of populism** Christopher Holmes, 2018-04-17 The rise of populism across Europe and the US first in the wake of the 2008 global financial crisis and then in the shape of Donald Trump's presidential campaign and the Brexit vote in 2016 are indicative of a seismic shift in the terrain of economic ideas in public discourse Settled liberal norms concerning ever increasing international market expansion and the political integration required to sustain it have been decisively upset by political forces that whilst once on the fringes now dominate economic debate How might we make sense of this ideological breakdown and what might we hope for next This book turns to the work of Karl Polanyi for answers developing the expansive historicised approach to political economy that Polanyi pioneered Holmes provides a wide ranging history of economic ideas read in terms of a series of hopeful theoretical visions of order in which political social and ecological contradictions could be transcended in one way or another Through this the book demonstrates that the failing utopian visions of pre 2008 economic orthodoxy which have formed the backdrop to the rise of populism today are only the latest in a series that stretches across economic thought in Western modernity as a whole This book will interest students and scholars of IPE political science sociology anthropology law and history
