Description:

This book builds theoretical statistics from the first principles of probability theory. Starting from the basics of probability, the authors develop the theory of statistical inference using techniques, definitions, and concepts that are statistical and are natural extensions and consequences of previous concepts. This book can be used for readers who have a solid mathematics background. It can also be used in a way that stresses the more practical uses of statistical theory, being more concerned with understanding basic statistical concepts and deriving reasonable statistical procedures for a variety of situations, and less concerned with formal optimality investigations.

Monte Carlo Statistical Methods Christian Robert, George Casella, 2013-03-14 Monte Carlo statistical methods particularly those based on Markov chains are now an essential component of the standard set of techniques used by statisticians This new edition has been revised towards a coherent and flowing coverage of these simulation techniques with incorporation of the most recent developments in the field In particular the introductory coverage of random variable generation has been totally revised with many concepts being unified through a fundamental theorem of simulation There are five completely new chapters that cover Monte Carlo control reversible jump slice sampling sequential Monte Carlo and perfect sampling There is a more in depth coverage of Gibbs sampling which is now contained in three consecutive chapters The development of Gibbs sampling starts with slice sampling and its connection with the fundamental theorem of simulation and builds up to two stage Gibbs sampling and its theoretical properties A third chapter covers the multi stage Gibbs sampler and its variety of applications Lastly chapters from the previous edition have been revised towards easier access with the examples getting more detailed coverage This textbook is intended for a second year graduate course but will also be useful to someone who either wants to apply simulation techniques for the resolution of practical problems or wishes to grasp the fundamental principles behind those methods The authors do not assume familiarity with Monte Carlo techniques such as random variable generation with computer programming or with any Markov chain theory the necessary concepts are developed in Chapter 6 A solutions manual which covers approximately 40% of the problems is available for instructors who require the book for a course Christian P Robert is Professor of Statistics in the Applied Mathematics Department at Universit Paris Dauphine France He is also Head of the Statistics Laboratory at the Center for Research in Economics and Statistics CREST of the National Institute for Statistics and Economic Studies INSEE in Paris and Adjunct Professor at Ecole
