

Model 2 – Random Sampling Method

- a. According to Model 2, what is the probability of selecting a red die in a random draw out of the bag below?

The probability of selecting a red die in a random draw out of this bag is 1/6. There are 6 sides, 1 is red.

- b. Suppose you draw a die from the bag above and it is a 6. How does this information in a random draw impact on the probability of selecting a red die in a subsequent draw without replacement?

The probability of selecting a red die is determined by using replacement, not by adding one more red die to the bag. If you draw a 6, you know the 6 is not red, so the probability of selecting a red die will get either higher or that not whether you get one more red die being added or not.
