Experiments in Ecology A. J. Underwood,1996-12-12 Ecological theories and hypotheses are usually complex because of natural variability in space and time which often makes the design of experiments difficult The statistical tests we use require data to be collected carefully and with proper regard to the needs of these tests This book first published in 1996 describes how to design ecological experiments from a statistical basis using analysis of variance so that we can draw reliable conclusions The logical procedures that lead to a need for experiments are described followed by an introduction to simple statistical tests This leads to a detailed account of analysis of variance looking at procedures assumptions and problems One factor analysis is extended to nested hierarchical designs and factorial analysis Finally some regression methods for examining relationships between variables are covered Examples of ecological experiments are used throughout to illustrate the procedures and examine problems This book will be invaluable to practising ecologists as well as advanced students involved in experimental design

Veech,2021-01-29 The identification and analysis of the particular habitat needs of a species has always been a central focus of research and applied conservation in both ecology and wildlife biology Although these two academic communities have developed quite separately over many years there is now real value in attempting to unify them to allow better communication and awareness by practitioners and students from each discipline Despite the recent dramatic increase in the types of quantitative methods for conducting habitat analyses there is no single reference that simultaneously explains

and compares all these new techniques This accessible textbook provides the first concise authoritative resource that clearly presents these emerging methods together and demonstrates how they can be applied to data using statistical methodology whilst putting the decades old pursuit of analyzing habitat into historical context Habitat Ecology and Analysis is written for senior undergraduate and graduate students taking courses in wildlife ecology conservation biology and habitat ecology as well as professional ecologists wildlife biologists conservation biologists and land managers requiring an accessible overview of the latest methodology

Sensory Evaluation of Food Harry T. Lawless,Hildegarde Heymann,2010-09-27 The eld of sensory science has grown exponentially since the publication of the p vious version of this work Fifteen years ago the journal Food Quality and Preference was fairly new Now it holds an eminent position as a venue for research on sensory test methods among many other topics Hundreds of articles relevant to sensory testing have appeared in that and in other journals such as the Journal of Sensory Studies Knowledge of the intricate cellular processes in chemoreception as well as their genetic basis has undergone nothing less than a revolution culminating in the award of the Nobel Prize to Buck and Axel in 2004 for their discovery of the olfactory receptor gene super family Advances in statistical methodology have accelerated as well

Sensometrics meetings are now vigorous and well attended annual events Ideas like Thurstonian modeling were not widely embraced 15 years ago but now seem to be part of the everyday thought process of many sensory scientists And yet some things stay the same Sensory testing will always involve human participants Humans are tough measuring instruments to work with They come with varying degrees of acumen training experiences differing genetic equipment sensory capabilities and of course different preferences Human foibles and their associated error variance will continue to place a limitation on sensory tests and actionable results Reducing controlling partitioning and explaining error variance are all at the heart of good test methods and practices
