Steel Structures Design And Behavior 4th Edition:

Steel Structures Charles G. Salmon, John Edwin Johnson, 1996 Appropriate for civil engineering courses in structural steel design the fourth edition of this classic text provides background for designing steel structural elements using the 1993 AISC Load and Resistance Factor Design LRFD and the 1989 AISC Allowable Stress Design ASD Specifications As in previous successful editions a logical sequence of topics is featured making complex material easy to understand Emphasis throughout is placed on the explanation of the LRFD approach involving limit states and factored loads To provide secondary coverage for the major topics such as tension members axially loaded columns beams beam columns and composite construction the ASD formulations are developed from the strength related concepts of LRFD Throughout the book all concepts are illustrated by numerical examples using LRFD for the most important concepts examples using ASD are also included Many new end of chapter problems and references round out the text s presentation Learning Aids Large Quantity of Numerical Examples Problems on Design Procedures Chapter Introductions Supplements For the Instructor Solutions Manual available only from your sales specialist

Steel Structures Charles G. Salmon, John Edwin Johnson, Faris Amin Malhas, 2009 The design of structural steel members has developed over the past century from a simple approach involving a few basic properties of steel and elementary mathematics to a more sophisticated treatment demanding a thorough knowledge of structural and material behavior Steel Structures Design and Behavior 5 e strives to present in a logical manner the theoretical background needed for developing and explaining design requirements Beginning with coverage of background material including references to pertinent research the development of specific formulas used in the AISC Specifications is followed by a generous number of design examples explaining in detail the process of selecting minimum weight members to satisfy given conditions

The Behaviour and Design of Steel Structures to EC3, Fourth Edition N.S. Trahair, M.A. Bradford, David Nethercot, Leroy Gardner, 2007-11-21 The fully revised fourth edition of this successful textbook fills a void which will arise when British designers start using the European steel code EC3 instead of the current steel code BS5950 The principal feature of the forth edition is the discussion of the behaviour of steel structures and the criteria used in design according to the British version of EC3 Thus it serves to bridge the gap which too often occurs when attention is concentrated on methods of analysis and the sizing of structural components Because emphasis is placed on the development of an understanding of behaviour many analytical details are either omitted in favour of more descriptive explanations or are relegated to appendices The many worked examples both illustrate the behaviour of steel structures and exemplify details of the design process The Behaviour and Design of Steel Structures to EC3 is a key text for senior undergraduate and graduate students and an essential reference tool for practising structural engineers in the UK and other countries
