following areas engineering technologies for precision agriculture agricultural systems management and digitalization in agriculture logistics in agriculture and other topics Selected materials of the largest regional scientific event INTERAGROMASH 2021 conference included in this book present the results of the latest research in the areas of precision agriculture and agricultural machinery industry The book is aimed for professionals and practitioners for researchers scholars and producers The materials presented here are used in the educational process at specific agricultural universities or during vocational training at enterprises and become an indispensable helper to farm managers in making the best agronomic decisions The book is also useful for representatives of regional authorities as it gives an idea of existing high tech solutions for agriculture

Energy-Efficient Scheduling under Delay Constraints for Wireless Networks Randal Berry,Eytan Modiano,Murtaza Zafer,2022-05-31 Packet delay and energy consumption are important considerations in wireless and sensor networks as these metrics directly affect the quality of service of the application and the resource consumption of the network especially for a rapidly growing class of real time applications that impose strict restrictions on packet delays Dynamic rate control is a novel technique for adapting the transmission rate of wireless devices almost in real time to opportunistically exploit time varying channel conditions as well as changing traffic patterns Since power consumption is not a linear function of the rate and varies significantly with the channel conditions adapting the rate has significant benefits in minimizing energy consumption These benefits have prompted significant research in developing algorithms for achieving optimal rate adaptation while satisfying quality of service requirements In this book we provide a comprehensive study of dynamic rate control for energy minimization under packet delay constraints We present several formulations and approaches adopted in the literature ranging from discrete time formulations and dynamic programming based solutions to continuous time approaches utilizing ideas from network calculus and stochastic optimal control theory The goal of this book is to expose the reader to the important problem of wireless data transmission with delay constraints and to the rich set of tools developed in recent years to address it Table of Contents Introduction Transmission Rate Adaptation under Deadline Constraints Average Delay Constraints
