Energy-Efficient Scheduling under Delay Constraints for Wireless Networks Randal Berry, Eytan Modiano, Murtaza Zafer, 2022-05-31 Packet delay and energy consumption are important

considerations in wireless and sensor networks as these metrics directly affect the quality of service of the application and the resource consumption of the network especially for a rapidly growing class of real time applications that impose strict restrictions on packet delays Dynamic rate control is a novel technique for adapting the transmission rate of wireless devices almost in real time to opportunistically exploit time varying channel conditions as well as changing traffic patterns Since power consumption is not a linear function of the rate and varies significantly with the channel conditions adapting the rate has significant benefits in minimizing energy consumption These benefits have prompted significant research in developing algorithms for achieving optimal rate adaptation while satisfying quality of service requirements In this book we provide a comprehensive study of dynamic rate control for energy minimization under packet delay constraints We present several formulations and approaches adopted in the literature ranging from discrete time formulations and dynamic programming based solutions to continuous time approaches utilizing ideas from network calculus and stochastic optimal control theory The goal of this book is to expose the reader to the important problem of wireless data transmission with delay constraints and to the rich set of tools developed in recent years to address it

Table of Contents Introduction Transmission Rate Adaptation under Deadline Constraints Average Delay Constraints **Wireless Communications and Sensing** Ta-Sung Lee, Ming-Chun Lee, Chia-Hung Lin, 2025-12-02 In this work from leading figures in the field Lee Lee and Lin describe methods of integrated sensing and communication ISAC and artificial intelligence aided radio systems to provide improved efficiency and performance to wireless users using next generation 6G communications systems The authors provide the tools to master four major considerations of 6G systems knowledge of communication systems knowledge of radar systems understanding of ISAC systems and machine learning based enhancements Wireless Communications and Sensing Fundamentals Signal Processing and Machine Learning Solutions begins by providing preliminary information regarding communication and radar systems including descriptions of system architecture and design concepts e g wireless propagation waveforms MIMO signal processing and multi user scenarios for entry level readers Throughout the authors describe novel artificial intelligence enabled approaches to aid the design of communication and radar systems Furthermore this book also describes the architecture and design concepts of ISAC systems and offers an in depth discussion of the applications of machine learning to communication radar and ISAC systems Readers will be able to use their comprehensive understanding of this field to enhance ISAC system performance or aid the deployment of ISAC systems in real world scenarios to fulfill 6G visions This book is especially valuable for graduate and higher level students scholars and engineers who want to step into the research areas of integrated sensing and communications and artificial intelligence aided radio systems Readers should have at least a bachelor's degree in engineering and have had some exposure to signals and systems communication theory and radar principles *XIV International Scientific Conference "INTERAGROMASH 2021"* Alexey Beskopylny, Mark Shamtsyan, 2021-10-30 This book contains original and fundamental research papers in the following areas
