GENERAL DESCRIPTION

The FT-757GXII combines the finest features of its famous predecessor, the FT-757GX, with new developments in response to technological advances and to the most popular requests from serious hf operators. New advances in digital control and computer-aided manufacturing methods allow the FT-757GXII to offer great versatility and operator convenience on all modes and all hf amateur radio bands, with 100 watts of PEP transmitter power output on the amateur bands, and general coverage reception from 0.15 to 30 MHz.

Special new digital features include operator selectable mode-dependent tuning steps, ten memory channels which store mode as well as frequency, auto-resume loop scanning between dual VFOs (or adjacent memories), a special clarifier memory, and an improved CAT (Computer Aided Transceiver) System for simplified programming and more advanced control by an external computer.

A 40dB IF Notch filter is provided along with continuously adjustable IF Shift for minimizing interference during SSB, CW and ECSS reception of AM signals. Wideband AM and narrowband CW IF filters are included as standard. A switchable RF amplifier and 20dB attenuator are provided to optimize sensitivity and dynamic range on all frequencies under a wide variety of conditions, while the noise blanking pulse width can be set on the front panel, continuously adjustable from narrow (ignition-type) to wide ("woodpecker") blanking pulse widths.

Full break-in QSK CW operation is provided with Yaesu's custom-designed electronic keyer built in, as a standard feature. New high voltage solid state transmit/receive switching circuitry is provided for direct t/r control of a wide variety of QSK and non-QSK linear amplifiers.
