C) Relay

Relays are switch-type that open and close circuits electromechanically or electronically. Relays control one electrical circuit by opening and closing the contacts in another circuit. Relays are used to switching circuits by giving a small signal to the coil inside it, when a signal is sent into the coil.

D) Zigbee

Zigbee is an IEEE 802.15.4- standard specification suited for high-level communication protocols used to create personal area networks with small, low-power digital radios, networks such as for home automation, medical devices data collections, and other low-power consumption and low-bandwidth needs, designed for small scale projects which is shown in fig 2.

Fig 15) ZIGBEE MODULE

E) Power supply

A power supply is an electrical device that supplies electric power to the electrical loads. The main functions of the power supply is to convert electric current from the source, to the correct voltage, as electrical power converters. Some power supplies are separated by stand alone pieces of equipment, while others are built into the load appliances that they power.

F) LCD

LCD [Liquid Crystal Display] screen is an electronic display module and to find a wide range of applications. A 16x2 Liquid crystal display is very basic module and is very commonly used in various devices and crystals in electronics and electrical. A 16x2 LCD means it can display 16 characters per line and there are 2 such lines and displays messages.

G) buzzer

A buzzer or beepers are an audio signalling devices in electrical items, which may be electrical, mechanical, electromechanical, or piezoelectric. Typical uses of buzzers and beepers include alarm devices, timers indicators, detectors.

H) PC

A personal computer is a multi-purpose computer whose size, shape, intelligence, capabilities, and price make it feasible for individual use. Personal computers are intended to be operated directly by an end user, rather than by a computer expert or technician.

VI. METHODOLOGY

1) TRANSMITTER SIDE

The proposed system deals with the idea of developing a system that prevents electricity theft. Here a microcontroller atmega32 is fixed in both transmitter side and receiver side. In both transmitter and receiver side the zigbee transmitter and receiver is fixed with the atmega32 microcontroller at input and output ports. A microcontroller is used which acts as the central control unit of the system which coordinates and controls all the input and output devices. Transmitter part consisting of two current transformers which are connected in the load. Then transformer is used to fix in the transmitter side to step down the ac current source and rectified to 12V dc current source because all the zigbee and other devices in our project works in the dc current source. The current transformer here acts as the power sensor. The microcontroller ATmega32
