Introduction to Probability Simulation and Gibbs Sampling with R Eric A. Suess, Bruce E. Trumbo, 2010-05-27
The first seven chapters use R for probability simulation and computation including random number generation numerical and Monte Carlo integration and finding limiting distributions of Markov Chains with both discrete and continuous states
Applications include coverage probabilities of binomial confidence intervals estimation of disease prevalence from screening tests parallel redundancy for improved reliability of systems and various kinds of genetic modeling
These initial chapters can be used for a non Bayesian course in the simulation of applied probability models and Markov Chains
Chapters 8 through 10 give a brief introduction to Bayesian estimation and illustrate the use of Gibbs samplers to find posterior distributions and interval estimates including some examples in which traditional methods do not give satisfactory results
WinBUGS software is introduced with a detailed explanation of its interface and examples of its use for Gibbs sampling for Bayesian estimation
No previous experience using R is required
An appendix introduces R and complete R code is included for almost all computational examples and problems along with comments and explanations
Noteworthy features of the book are its intuitive approach presenting ideas with examples from biostatistics reliability and other fields its large number of figures and its extraordinarily large number of problems about a third of the pages ranging from simple drill to presentation of additional topics
Hints and answers are provided for many of the problems
These features make the book ideal for students of statistics at the senior undergraduate and at the beginning graduate levels

Encyclopedia of Epidemiology Sarah Boslaugh, 2008
Presents information from the field of epidemiology in a less technical more accessible format
Covers major topics in epidemiology from risk ratios to case control studies to mediating and moderating variables and more
Relevant topics from related fields such as biostatistics and health economics are also included
Business Statistics, 4th Edition J.K. Sharma, 2018
The fourth edition of Business Statistics builds upon the easy to understand problem solving approach that was the hallmark of the previous editions
Through detailed discussions on procedures that facilitate interpretation of data this book enables readers to make more considered and informed business decisions
Using tools of application and practice in a variety of solved examples and practice problems this book will sharpen

the students understanding of basic statistical techniques Business Statistics 4e serves as a core textbook for students of management commerce and computer science studying business statistics for degrees in BBA MBA PGDBM BCom MCom CA ICWA and BE BTech MCA as well as for those preparing for professional and competitive examinations Key Features Learning Objectives clearly outline the learning outcomes of each chapter Case Studies illustrate a variety of business situations and suggest solutions to managerial issues using specific statistical techniques A Chapter Concepts Quiz at the end of each chapter reinforces students understanding of the basic principles and applications Conceptual Questions Self Practice Problems Review Self Practice Problems with Hint and Answers enable students after each chapter to practice and then evaluate themselves

Handbook of Statistical Methods for Randomized Controlled Trials KyungMann Kim, Frank Bretz, Ying Kuen K. Cheung, Lisa V. Hampson, 2021-08-23 Statistical concepts provide scientific framework in experimental studies including randomized controlled trials In order to design monitor analyze and draw conclusions scientifically from such clinical trials clinical investigators and statisticians should have a firm grasp of the requisite statistical concepts The Handbook of Statistical Methods for Randomized Controlled Trials presents these statistical concepts in a logical sequence from beginning to end and can be used as a textbook in a course or as a reference on statistical methods for randomized controlled trials Part I provides a brief historical background on modern randomized controlled trials and introduces statistical concepts central to planning monitoring and analysis of randomized controlled trials Part II describes statistical methods for analysis of different types of outcomes and the associated statistical distributions used in testing the statistical hypotheses regarding the clinical questions Part III describes some of the most used experimental designs for randomized controlled trials including the sample size estimation necessary in planning Part IV describe statistical methods used in interim analysis for monitoring of efficacy and safety data Part V describe important issues in statistical analyses such as multiple testing subgroup analysis competing risks and joint models for longitudinal markers and clinical outcomes Part VI addresses selected miscellaneous topics in design and analysis including multiple assignment randomization trials analysis of safety outcomes non inferiority trials incorporating historical data and validation of surrogate outcomes

Police Work and Identity Andrew Faull, 2017-09-07 This is a book about the men and women who police contemporary South Africa Drawing on rich original ethnographical data it considers how officers make sense of their jobs and how they find meaning in their duties It demonstrates that the dynamics that lead to police abuses and scandals in transitional and neo liberalising regimes such as South Africa can be traced to the day to day experiences and ambitions of the average police officer It is about the stories they tell themselves about themselves and their social worlds and how these shape the order they produce through their work By focusing on police officers this book positions the individual in primacy over the organisation asking what policing looks like when motivated by the pursuit of ontological security in precarious contexts It acknowledges but downplays the importance of police culture in determining officers attitudes and behaviour and reminds

readers that most officers lives are entangled in and shaped by a range of social political and cultural forces It suggests that a job in the South African Police Service SAPS is primarily just that a job Most officers join the organisation after other dreams have slipped beyond reach their presence in the Service being almost accidental But once employed they re write their self narratives and enact carefully choreographed performances to ease managerial and public pressure and to rationalize their coercive practices In an era where evidence and what works reigns supreme and where cop culture is often deemed a primary socializing force this book emphasises how officers personal histories ambitions and vulnerabilities remain central to how policing unfolds on the street
