P. Shiel,2008-05-01 **The Composer's Black Box** Theodore Gordon,2025-12-02 Stories about new musical instruments are often told as quests for new kinds of sounds The Composer s Black Box asks What happens when new musical instruments produce not only new sounds but also new dynamics of musical agency and control And what consequences do those new dynamics have for musicality beyond sound With a focus on five key figures Morton Subotnick Pauline Oliveros Donald Buchla Alvin Lucier and Sun Ra this book explores how scientific and technological developments in mid twentieth century America galvanized musicians to reconfigure their conceptions of sociality freedom and the creative self Theodore Gordon shows how cybernetic thinking in a range of disciplines from experimental music to jazz and electrical engineering has shaped musical techniques and technologies and changed what it means to be a composer or more broadly a music making human in an increasingly informational world Advanced Communication and Networking Tai-hoon Kim,Hojjat Adeli,Rosslin John Robles,Maricel Balitanas,2011-08-05 This volume constitutes the refereed proceedings of the 3rd International Conference on Advanced Communication and Networking ACN 2011 held in Brno Czech Republik in June 2011 The 57 revised full papers presented in this volume were carefully reviewed and selected from numerous submissions The papers focus on the various aspects of progress in Advanced Communication and Networking with computational sciences mathematics and information technology and address all current issues of communication basic and infrastructure networks basic and management multimedia application image video signal and information processing The Literature of Reconstruction Wolfgang Funk,2017-03-23 Winner of the 2016 ESSE Junior Scholar Book Award in Literatures in the English Language The Literature of Reconstruction argues for the term and concept of postmillennial reconstruction to fill the gap left by the decline of postmodernism and deconstruction as useful cultural and literary categories Wolfgang Funk shows how this notion emerges from the theoretical and philosophical development that led to the demise of postmodernism by relating it to the idea of authenticity immediate experience that eludes direct representation In addition he provides a clear formal

framework with which to identify and classify the features of reconstructive literature by updating the narratological category of metafiction originally established in the 1980s Based on Werner Wolf's observation of a metareferential turn in contemporary arts and media he illustrates how the specific use of metareference results in a renegotiation of the specific patterns of literary communication and claims that this renegotiation can be profitably described with the concept of reconstruction To substantiate this claim in the second half of the book Funk discusses narrative texts that illustrate this transition from postmodern deconstruction to postmillennial reconstruction The analyses take in distinguished and prize winning writers such as Dave Eggers Julian Barnes Jennifer Egan and Jasper Fforde The broad scope of authors featuring writers from the US as well as the UK underlines the fact that the reconstructive tendencies and strategies Funk diagnoses are of universal significance for the intellectual and cultural self image of the global North

*Systems Science and Cybernetics - Volume III* Francisco Parra-Luna, The subject Systems sciences and cybernetics is the outcome of the convergence of a number of trends in a larger current of thought devoted to the growing complexity of primarily social objects and arising in response to the need for globalized treatment of such objects This has been magnified by the proliferation and publication of all manner of quantitative scientific data on such objects advances in the theories on their inter relations the enormous computational capacity provided by IT hardware and software and the critical revisiting of subject object interaction not to mention the urgent need to control the efficiency of complex systems where efficiency is understood to mean the ability to find a solution to many social problems including those posed on a planetary scale The result has been the forging of a new academically consolidated scientific trend going by the name of Systems Theory and Cybernetics with a comprehensive multi disciplinary focus and therefore apt for understanding realities still regarded to be inescapably chaotic This subject entry is subdivided into four sections The first an introduction to systemic theories addresses the historic development of the most commonly used systemic approaches from new concepts such as the so called geometry of thinking or the systemic treatment of non systemic identities to the taxonomic entropic axiological and ethical problems deriving from a general systemic cybernetic conceit Hence the focus in this section is on the historic and philosophical aspects of the subject Moreover it may be asserted today that beyond a shadow of a doubt problems in particular problems deriving from human interaction but in general any problem regardless of its nature must be posed from a systemic perspective for otherwise the obstacles to their solution are insurmountable Reaching such a perspective requires taking at least the following well known steps a statement of the problem from the determinant variables or phenomena b adoption of theoretical models showing the interrelationships among such variables c use of the maximum amount of wherever possible quantitative information available on each d placement of the set of variables in an environment that inevitably pre determines the problem That epistemology would explain the substantial development of the systemic cybernetic approach in recent decades The articles in the second section deal in particular with the different methodological

approaches developed when confronting real problems from issues that affect humanity as a whole to minor but specific questions arising in human organizations. Certain sub themes are discussed by the various authors always from a didactic vantage including problem discovery and diagnosis and development of the respective critical theory, the design of ad hoc strategies and methodologies, the implementation of both qualitative soft system methodologies and formal and quantitative such as the General System Problem Solver or the axiological operational perspective approaches, cross disciplinary integration and suitable methods for broaching psychological, cultural and socio political dynamisms. The third section is devoted to cybernetics in the present dual meaning of the term: on the one hand, control of the effectiveness of communication and actions; and on the other, the processes of self production of knowledge through reflection and the relationship between the observing subject and the observed object when the latter is also observer and the former observed. Known as second order cybernetics, this provides an avenue for rethinking the validity of knowledge such as, for instance, when viewed through what is known as bipolar feedback processes through which interactions create novelty, complexity and diversity. Finally, the fourth section centres around artificial and computational intelligence, addressing sub themes such as neural networks, the simulated annealing that ranges from statistical thermodynamics to combinatory problem solving such as in the explanation of the role of adaptive systems or when discussing the relationship between biological and computational intelligence.

*Postcolonial Opera* Juliana M. Pistorius, 2025-05-27. Postcolonial Opera examines the social and political role of opera in the postcolony. Taking the multimedia operatic experiments of William Kentridge, South Africa's most celebrated contemporary visual artist, as a starting point, author Juliana M. Pistorius investigates contemporary opera's potential to process the troubled histories that haunt post and decolonial societies.

**Dynamic Neural Networks for Robot Systems: Data-Driven and Model-Based Applications** Long Jin, Predrag S. Stanimirovic, Sendren Sheng-Dong Xu, 2024-07-24. Neural network control has been a research hotspot in academic fields due to the strong ability of computation. One of its widely applied fields is robotics. In recent years, plenty of researchers have devised different types of dynamic neural network (DNN) to address complex control issues in robotics fields in reality. Redundant manipulators are no doubt indispensable devices in industrial production. There are various works on the redundancy resolution of redundant manipulators in performing a given task with the manipulator.

model information known However it becomes knotty for researchers to precisely control redundant manipulators with unknown model to complete a cyclic motion generation CMG task to some extent It is worthwhile to investigate the data driven scheme and the corresponding novel dynamic neural network DNN which exploits learning and control simultaneously Therefore it is of great significance to further research the special control features and solve challenging issues to improve control performance from several perspectives such as accuracy robustness and solving speed Enterprise Interoperability Matthieu Luras,Martin Zelm,Bernard Archimède,Frédéric Benaben,Guy Doumeigns,2015-01-05 Enterprises and organizations of any kind embedded in today s economic environment are deeply dependent on their ability to take part in collaborations Consequently it is strongly required for them to get actively involved for their own benefit in emerging potentially opportunistic collaborative enterprise networks The concept of interoperability has been defined by INTEROP VLab as The ability of an enterprise system or application to interact with others at a low cost in a flexible approach Consequently interoperability of organizations appears as a major issue to succeed in building on the fly emerging enterprise networks The International Conference on Interoperability for Enterprise Systems and Applications I ESA 2014 was held under the motto interoperability for agility resilience and plasticity of collaborations on March 26 28 2014 and organized by the Ecole des Mines d Albi Carmaux France on behalf of the European Laboratory for Enterprise Interoperability INTEROP VLab On March 24 25 co located with the conference eight workshops and one doctoral symposium were held in four tracks complementing the program of the I ESA 14 conference The workshops and the doctoral symposium address areas of greatest current activity focusing on active discussions among the leading researchers in the area of Enterprise Interoperability This part of the conference helps the community to operate effectively building co operative and supportive international links as well as providing new knowledge of on going research to practitioners The workshops and doctoral symposium aimed at exploiting new issues challenges and solutions for Enterprise Interoperability EI and associated domains of innovation such as Smart Industry Internet Of Things Factories of the Future EI Applications and Standardisation These proceedings include the short papers from the I ESA 14 workshops and the doctoral symposium The book is split up into 9 sections one for each workshop and one for the doctoral symposium All sections were organized following four tracks 1 EI and Future Internet Factory of the Future 2 EI Application Domains and IT 3 EI Standards 4 EI Doctoral Symposium For each section a workshop report is provided summarizing the content and the issues discussed during the sessions The goal of the first track was to offer a discussion opportunity on interoperability issues regarding the use of Internet of Things on manufacturing environment Workshops 1 and 3 on one hand and regarding the potential of innovation derived from the use of digital methods architectures and services such as Smart Networks Workshops 2 and 4 on the other hand The second track focused on particular application domains that are looking for innovative solutions to support their strong collaborative needs Thus the track developed one workshop on the use of EI solution for Future City Logistics Workshop 5 and one on the

use of EI solutions for Crisis Disaster Management Workshop 6 The third track studied the recent developments in EI standardization Two workshops were dedicated to this issue The first one has proposed to focus on the management of standardization Workshop 8 and the second one has chosen to work on the new knowledge on standardization developments in the manufacturing service domain Workshop 9 The last track the doctoral symposium presented research results from selected dissertations The session discussed EI knowledge issues notably in terms of gathering through social networks or Internet of Things and of exploitation through innovative decision support systems      *Perspectives of Systems Informatics* Manfred Broy,Alexandre V. *Computer-Aided Transit Scheduling* Joachim R. Daduna,Anthony Wren,2012-12-06 This volume consists of papers presented at the Fourth International Workshop on Computer Aided Scheduling of Public Transport which was held in Hamburg from 28th to 31st July 1987 The first of this series of Workshops was held in Chicago in 1975 Papers presented then tended to look forward to what might be done in the future application of computers to problems in transit scheduling No presentations described systems which had been implemented and were being used on a regular basis although a few papers discussed apparently successful once off applications in both bus scheduling and bus crew scheduling or run cutting However within a few months of the end of that first workshop some systems had been implemented both in Europe and in North America By the time of the second Workshop in Leeds in 1980 several systems were in regular use Most of the crew scheduling implementations were based on heuristic methods e g RUCUS although mathematically based methods were being used in Quebec City and in Hamburg and several papers described further mathematical methods in the course of development A wide variety of bus scheduling approaches was reported many of them being in regular use
