Agarwal, Lipika Ray, Amit Kumar Tripathi, 2019-11-17 This book summarizes the potent effect of ultraviolet radiation (UVR) on the photoaging and cancer formation. Skin is the largest human organ which continually reconstructs itself to ensure its viability, integrity, and ability to provide protection for the body. This protection can be compromised by the aging of the skin, which ultimately promotes skin inflammation, impaired wound repair, and increased risk of skin cancer. The book entails mechanistic insights into the UVR-induced immunomodulation and DNA damage in the skin to delineate the pathogenesis and develop novel ways for prevention of photoaging of the skin cells. It also elucidates the potential of nanotechnology in the treatment of skin cancer. Further, it discusses the bioinformatics approaches to understand the molecular mechanism of photoaging and cancer formation. **Diagnosis of Aging Skin Diseases** Robert A. The Parasite-Stress Theory of Values and Sociality Randy Thornhill, Corey L. Fincher, 2014-07-17 This book develops and tests an ecological and evolutionary theory of the causes of human values the core beliefs that guide people s cognition and behavior and their variation across time and space around the world We call this theory the parasite stress theory of values or the parasite stress theory of sociality The evidence we

present in our book indicates that both a wide span of human affairs and major aspects of human cultural diversity can be understood in light of variable parasite infectious disease stress and the range of value systems evoked by variable parasite stress. The same evidence supports the hypothesis that people have psychological adaptations that function to adopt values dependent upon local infectious disease adversity. The authors have identified key variables: variation in infectious disease adversity and in the core values it evokes for understanding these topics and in novel and encompassing ways. Although the human species is the focus in the book, evidence presented in the book shows that the parasite stress theory of sociality informs other topics in ecology and evolutionary biology such as variable family organization and speciation processes and biological diversity in general in non human animals.
