

TOPIC 1: CELL BIOLOGY

1.1. Introduction to cells

Cell theory:

- All living things are composed of cells
- The cell is the smallest unit of life
- Cells only arise from pre-existing cells

Atypical examples

- **Striated muscle** → (challenge: one nucleus) long and multi-nucleated
- **Fungal hyphae** → (challenge: single unit) very large, multi-nucleated, continuous cytoplasm
- **Glaciar algae** → (challenge: simple and small) gigantic, complex form

Functions of life (MR TIGRIN)

1. **Metabolism** – all the chemical reactions in the cell which are responsible for all the actions of organisms (e.g. respiration)
2. **Response** – living things can respond to changes in the environmental conditions
3. **Homeostasis** – the maintenance and regulation of internal cell conditions (e.g. water and pH)
4. **Growth** – living things can grow or change in size/shape
5. **Reproduction** – living things reproduce offspring
 - **Sexual reproduction** (two parents)
 - **Asexual reproduction** (one parent)
6. **Excretion** – the removal of metabolic waste
7. **Nutrition** – feeding by either the synthesis of organic molecules (e.g. photosynthesis) or the absorption of organic matter

Surface Area : Volume

Plasma membrane is responsible for import/export in the cell.

SMALLER THE CELL:

- Better to **lose heat** so that enzymes do not denature
- Greater SA:Vol ratio for diffusion → **cell more efficient**
- Diffusion pathway is shorter → cell more efficient

GREATER THE CELL:

- Decreased SA:Vol ratio → cell conserve better heat

Example 1: Intestine folded covered of villi and microvilli → create larger SA:Vol → greater rate of absorption

Example 2: Lungs made of alveoli → create larger SA:Vol

Magnification Formula

1mm = 1000µm (micrometres)
1mm = 1.000.000nm (nanometres)

Bartlett,2008-02-01 We are currently experiencing a fundamental shift in the way in which we approach the characterization of cancer Never before has the make up of cancer tissues and individual cells been so exhaustively researched and char terized We are now capable of producing molecular fingerprints that ch acterize the expression of all known and unknown genes within tumors and their surrounding tissues More than 30 000 different genes may be measured in each patient s tumor in a single experiment Simultaneously novel therapies that exploit the molecular roadmap have been developed and are now being offered to patients These novel agents such as Glivec Herceptin Iressa and others specifically target individual genes within tumors and can produce d matic responses in some patients These drugs

are only the forerunners of a coming tidal wave of novel therapeutics that individually target specific molecules within cancer cells more than 300 such agents are currently in phase I or II clinical trials This is an exciting time for cancer specialists and patients alike However if we have learned anything from the past 50 or more years of research into cancer it is that Lord Beaverbrook in founding the British national health service in the 1950s was frighteningly prescient when he defined the primary goal of health care to be Diagnosis Diagnosis Diag sis Now more than ever it is essential that appropriate diagnostic methods and approaches are applied to the selection of patients for treatment
