Rudy,2016-09-26 Medieval manuscripts resisted obsolescence Made by highly specialised craftspeople scribes illuminators book binders with labour intensive processes using exclusive and sometimes exotic materials parchment made from dozens

or hundreds of skins inks and paints made from prized minerals animals and plants books were expensive and built to last They usually outlived their owners Rather than discard them when they were superseded book owners found ways to update amend and upcycle books or book parts These activities accelerated in the fifteenth century Most manuscripts made before 1390 were bespoke and made for a particular client but those made after 1390 especially books of hours were increasingly made for an open market in which the producer was not in direct contact with the buyer Increased efficiency led to more generic products which owners were motivated to personalise It also led to more blank parchment in the book for example the backs of inserted miniatures and the blank ends of textual components Book buyers of the late fourteenth and throughout the fifteenth century still held onto the old connotations of manuscripts that they were custom made luxury items even when the production had become impersonal Owners consequently purchased books made for an open market and then personalised them filling in the blank spaces and even adding more components later This would give them an affordable product but one that still smacked of luxury and met their individual needs They kept older books in circulation by amending them attached items to generic books to make them more relevant and valuable and added new prayers with escalating indulgences as the culture of salvation shifted Rudy considers ways in which book owners adjusted the contents of their books from the simplest add a marginal note sew in a curtain to the most complex take the book apart embellish the components with painted decoration add more quires of parchment By making sometimes extreme adjustments book owners kept their books fashionable and emotionally relevant This study explores the intersection of codicology and human desire Rudy shows how increased modularisation of book making led to more standardisation but also to more opportunities for personalisation She asks What properties did parchment manuscripts have that printed books lacked What are the interrelationships among technology efficiency skill loss and standardisation *Petrus Christus* Maryan W. Stovel John Canne, 1849 **The Hill-Brown Theory of the Moon's Motion** Curtis Wilson, 2010-06-03 The Hill Brown theory of the Moon's motion was constructed in the years from 1877 to 1908 and adopted as the basis for the lunar ephemerides in the nautical almanacs of the US UK Germany France and Spain beginning in 1923 At that time and for some decades afterward it was the most accurate lunar theory ever constructed Its accuracy was due first to a novel choice of intermediary orbit or first approximation more nearly closing in on the Moon's actual motion than any

elliptical orbit ever could and secondly to the care and discernment and stick to it iveness with which the further approximations perturbations to this initial orbit had been computed and assembled so as yield a nal theory approximating the Moon s path in real space with an accuracy of a hundredth of an arc second or better The method by which the Hill Brown lunar theory was developed held the potentiality for still greater accuracy The intermediary orbit of the Hill Brown theory may be described as a periodic solution of a simpli ed three body problem with numerical parameters carried to 15 decimal places George William Hill a young American mathematician working for the U S Nautical Almanac Of ce had proposed it and computed the numerical parameters to their 15 places A self effacing loner he had in his privately pursued studies come to see that the contemporary attempts at predicting the Moon s motion were guaranteed to fail in achieving a lunar ephemeris of the accuracy desired

Iliev, 2006-11-10 The main subject of this book is an up to date and in depth survey of the theory of normal frames and coordinates in differential geometry The existing results as well as new ones obtained lately by the author on the theme are presented The text is so organized that it can serve equally well as a reference manual introduction to and review of the current research on the topic Correspondingly the possible audience ranges from graduate and post graduate students to sci tists working in differential geometry and theoretical mathematical physics This is re ected in the bibliography which consists mainly of standard text books and journal articles The present monograph is the rst attempt for collecting the known facts concerning normal frames and coordinates into a single publication For that rson the considerations and most of the proofs are given in details Conventionally local coordinates or frames which can be holonomic or not are called normal if in them the coe cients of a linear connection vanish on some subset usually a submanifold of a differentiable manifold Until recently the ex tence of normal frames was known proved only for symmetric linear connections on submanifolds of a manifold Now the problems concerning normal frames for derivations of the tensor algebra over a differentiable manifold are well investigated in particular they completely cover the exploration of normal frames for arbitrary linear connections on a manifold These rigorous results are important in conn tion with some physical applications

The Professional and Amateur Photographer, 1905 The American Amateur Photographer, 1891 **Theory of Gravitational Interactions** Maurizio Gasperini, 2016-11-25 This is the second edition of a well received book that is a modern self contained introduction to the theory of gravitational interactions The new edition includes more details on gravitational waves of cosmological origin the so called brane world scenario and gravitational time delay effects The first part of the book follows the traditional presentation of general relativity as a geometric theory of the macroscopic gravitational field while the second more advanced part discusses the

deep analogies and differences between a geometric theory of gravity and the gauge theories of the other fundamental interactions This fills a gap within the traditional approach to general relativity which usually leaves students puzzled about the role of gravity The required notions of differential geometry are reduced to the minimum allowing room for aspects of gravitational physics of current phenomenological and theoretical interest such as the properties of gravitational waves the gravitational interactions of spinors and the supersymmetric and higher dimensional generalization of the Einstein equations This textbook is primarily intended for students pursuing a theoretical or astroparticle curriculum but is also relevant for PhD students and young researchers *Dynamics of Planets and Satellites and Theories of Their Motion* V.G.
