Advances in Physical Organic Chemistry John P. Richard, 2009-05-27 Advances in Physical Organic Chemistry provides the chemical community with authoritative and critical assessments of the many aspects of physical organic chemistry. The field is a rapidly developing one with results and methodologies finding application from biology to solid state physics. Reviews the application of quantitative and mathematical methods towards understanding chemical problems. Covers organic organometallic bioorganic enzymes and materials topics.

Organic Manifesto Maria Rodale, 2011-03-01 Drawing on findings from leading health researchers as well as conversations with both chemical and organic farmers from coast to coast, Maria Rodale's *Organic Manifesto* irrefutably outlines the unacceptably high cost of chemical farming on our health and our environment. She traces the genesis of chemical farming and the rise of the immense companies that profit from it, bringing to light the government's role in allowing such practices to flourish. She further explains that modern organic farming would not only help reverse climate change by reducing harmful carbon emissions and soil depletion but would also improve the quality of the food we eat, reduce diseases from asthma to cancer, and ensure a better quality of life in farming communities nationwide. For every parent wondering how best to safeguard the health and safety of her children, for every environmentalist in search of a solution to the worsening crisis that afflicts our land, air, and waters, for every shopper who questions whether it is worth it to pay more for organic, Maria Rodale offers straightforward answers and a single definitive course of action: We must demand organic now.

The Vortex Frank Uekötter, 2024-04-18 Environmental challenges are defining the twenty-first century. To fully understand ongoing debates about our current crises—climate change, loss of biological diversity, pollution, extinction, resource woes—means revisiting their origins in all their complexity. With this ambitious, highly original contribution to the environmental history of global modernity, Frank Uekötter considers the many ways humans have had an impact on their physical environment throughout history. Ours is not a one-way trajectory to sudden collapse, he argues, but rather death by a thousand cuts. The many paths we've forged to arrive in our current predicament, from agriculture to industry to infrastructure, must be considered collectively if we are to stay afloat in what Uekötter describes as a vortex, a powerful metaphor for the flow of history capturing the momentum and the many crosscurrents that swept people and environments along. His book invites us to look at environmental challenges from multiple perspectives, including all the twists and turns that have helped to create the mess we find ourselves in. Uekötter has written a world history for an age where things are falling apart, where we know what lies ahead and are equipped with the right tools, technological and otherwise, and plenty of experience to deal with environmental challenges but somehow fail to get our affairs in order.
