The Antidote Inside The World Of New Pharma:

The Antidote Barry Werth, 2014-02-04 In this timely and much praised book Barry Werth draws upon inside reporting that spans more than two decades. He provides a groundbreaking close up of the upstart pharmaceutical company Vertex and the ferocious but indispensable world of Big Pharma that it inhabits. In 1989 the charismatic Joshua Boger left Merck then America's most admired business to found a drug company that would challenge industry giants and transform health care. Werth described the company's tumultuous early days during the AIDS crisis in *The Billion Dollar Molecule* a celebrated classic of science and business journalism. Now he returns to tell a riveting story of Vertex's bold endurance and eventual success. The \$325 billion a year pharmaceutical business is America's toughest and one of its most profitable. It's riskier and more rigorous at just about every stage than any other business from the towering biological uncertainties inherent in its mission to treat disease to the 30 to 1 failure rate in bringing out a successful medicine even after a molecule clears all the hurdles to get to human testing to the multibillion dollar cost of ramping up a successful product to operating in the world's most regulated industry matched only by nuclear power. Werth captures the full scope of Vertex's twenty-five year drive to deliver breakthrough medicines. At a time when America struggles to maintain its innovative edge *The Antidote* is a powerful inside look at one of the most intriguing and important business stories of recent decades.

Torrence, 2017-12-13 Molecules of nature are created by living organisms in their quest to survive and thrive in Earth's challenging environments This age's old evolutionary struggle has produced an immense library of chemicals from which humans have selected invaluable therapeutics critical to modern medicine Natural products presently provide half of all prescription medications and 70% of all cancer drugs The success of continued drug development from natural products depends upon the diversity of molecules of nature which in turn depends upon biodiversity Unfortunately human caused damage to the environment from pollution to habitat loss to overexploitation of resources is causing unprecedented ecological damage and death of species a mass extinction event Unless this biotic crisis is obviated humanity will lose a primary source of future novel medicines This book assembles a powerful argument for nature's critical role in providing medicines for humanity and how that irreplaceable service is threatened by the extinction crisis A sampling of the molecules of nature employed in modern medicine reads like a catalog of biodiversity For example one of the most prescribed drugs in the United States is lisinopril which controls high blood pressure Lisinopril originated from the venom of a deadly viper from the Amazonian forests A denizen of US southwestern deserts provided a therapeutic for type II diabetes The ancient horseshoe crab of the US Atlantic coast enables a critical test for deadly endotoxins in medical products of all kinds Once a diagnosis of acute lymphocytic leukemia in children was a death sentence A tropical flower from Madagascar provided two natural products that changed a 90% fatality rate to a 90% cure rate The Pacific Yew tree from the US northwest was discovered to contain the potent anticancer agent Taxol now vital in the treatment of breast and ovarian cancers and Kaposi's sarcoma This book tells the fascinating story of these and other medicines It also summarizes some of the driving forces of the Sixth Mass Extinction and shows how it threatens at least half of the planet's species with extinction We rightly ask What will be the future of medicine without the contribution of millions of species How many treatments for disease will be forever lost What cures are we asking future generations to forgo As we willy nilly extinguish the future of one organism after another together with all the knowledge they hold we are like the looters of the Great Library of Alexandria The final chapter challenges readers to pursue a different outcome By uniting our efforts we can

still preserve many of the remaining species on our blue green planet and the invaluable gifts they offer *Prisoner of Lies*
Barry Werth, 2025-08-19 A riveting The Economist gripping Kirkus Reviews starred review true story of the longest held
prisoner of war in American history John Downey Jr a CIA officer captured in China during the Korean War and imprisoned
for twenty one years John Jack Downey Jr was a new Yale graduate in the post World War II years who like other Yale grads
was recruited by the CIA He joined the Agency and was sent to Japan in 1952 during the Korean War In a violation of
protocol he took part in an air drop that failed and was captured over China His sources on the ground had been
compromised and his identity was known Although he first tried to deny who he was he eventually admitted the truth But
government policy forbade ever acknowledging the identity of spies no matter the consequences Washington invented a
fictitious cover story and stood by it for four administrations As a result Downey was imprisoned during the decades that Red
China as it was called was considered by the US to be a hostile nation until 1972 when the US finally recognized the
mainland Chinese government He had spent twenty one years in captivity Downey would go on to become a lawyer and an
esteemed judge in Connecticut his home state Prisoner of Lies is based in part on a prison memoir that Downey wrote several
years after his release Barry Werth fluently weaves excerpts from the memoir with the Cold War events that determined
Downey s fate Like a le Carr novel this is a thrilling richly informative Stephen Kinzer author of The Brothers story of one
man whose life is at the mercy of larger forces outside of his control in Downey s case as a pawn of the Cold War and more
specifically the Oval Office and the State Department His freedom came only when US foreign policy dramatically changed
Above all Prisoner of Lies is an inspiring story of remarkable fortitude and resilience **A Time-Release History of the**

Opioid Epidemic J.N. Campbell, Steven M. Rooney, 2018-06-09 This Brief takes the reader on a chemical journey by
following the history for over two centuries of how an opiate became an opioid thus spawning an empire and a series of
crises These imperfect resemblances of alkaloids are both natural and synthetic substances that particularly in America are
continually part of a growing concern about overuse This seemed an inviting prospect for those in pain but as the ubiquitous
media coverage continues to lay bare the levels of abuse point to the fact that perhaps an epidemic is upon us if not a culture
war Seeking answers to how and why this addiction crisis transpired over two hundred years of long development this Brief
examines the role that the chemistry laboratory played in turning patients into consumers By utilizing a host of diverse
sources this Brief seeks to trace the design and the production of opioids and their antecedents over the past two centuries
From the isolation and development of the first alkaloids with morphine that relieved pain within the home and on the
battlefield to the widespread use of nostrums and the addiction crisis that ensued to the dissemination of drugs by what
became known as Big Pharma after the World Wars and finally to competition from home made pharmaceuticals the
progenitor was always in some form a type of chemistry lab At times the laboratory pressed science to think deeply about
society s maladies such as curing disease and alleviating pain in order to look for new opportunities in the name of progress

Despite the best intentions opioids have created a paradox of pain as they were manipulated by creating relief with synthetic precision and influencing a dystopian vision Thus influence came in many forms from governments from the medical community and from the entrepreneurial aspirations of the general populace For better but mostly for worse all played a role in changing forever the trajectory of what started with the isolation of a compound in Germany Combining chemistry and history in a rousing new long form narrative that even broadens the definition of a laboratory the origins and future of this complicated topic are carefully examined Science, the State and the City Geoffrey Owen, Michael M. Hopkins, 2016-04-15 The book examines the evolution of one of the most important technologies that has emerged in the last fifty years biotechnology the use of living organisms or parts thereof to create useful products and services The most important application of biotechnology has been in medicine in the development of new drugs The central purpose of the book is to explain how firms based in the US took the lead in commercialising the technology and why it has been so difficult for firms in other countries to match what the leading American companies have achieved The book looks at the institutions and policies which have underpinned US success in biotechnology This is the US innovation ecosystem and it is made up of several interlocking elements which constitute a powerful competitive advantage for US biotechnology firms These include a higher education system which has close links with industry massive support from the Federal government for biomedical research and a financial system which is well equipped to support young entrepreneurial firms in a science based industry In the light of US experience the book examines in detail the performance of UK biotechnology firms over the past forty years starting with the creation of the UK's first dedicated biotech firm Celltech in 1980 The book shows how the UK made a promising start in the 1980s and 1990s but failed to build on it Several leading firms failed and after an initial burst of enthusiasm investors lost confidence in the British biotech sector It is only the last few years that the sector has staged a revival attracting fresh investment from the US as well from the UK The story told in this book based on extensive interviews with industry participants investors and policy makers in the UK Continental Europe and the US sheds new light on one of the central issues facing governments in the advanced industrial countries how to create and sustain new science based industries
