The Things of the World James A. Aho, 1998-10-30 What does it mean to be a social being in the ordinary life world This clear and compelling introduction to social phenomenology examines the experiential features of the basic things comprising our life world namely me you abstract others enemies communities and associations and attributes of the lived body emotions pain and pleasure Each of these entities is phenomenologically described with the aim of reducing reports of personal experiences and other primary documents to the presumed prototypical experience of the thing in question its ideal essence Another aim

of this study is to sociologically account for how the various entities of the life world have been accomplished that is how the prototypical experiences of the things in question have come to be. By showing the life world to be our joint project rather than a fixed unalterable coherency this volume destabilizes our naive attitude towards the things of the world. Examples are drawn from the author's own research on issues such as violence, religion, health and race from classic and contemporary anthropological research and from the works of some of the most innovative philosophers of the twentieth century. This study actually does phenomenology instead of merely arguing for its necessity and will appeal to both social scientists and philosophers.

Young Children's Developing Understanding of the Biological World Peter J. Marshall, Kimberly Brenneman, 2019-07-23 This book explores current research on young children's beliefs and knowledge about the biological world otherwise known as folkbiology. Contributors discuss factors that shape the development of folkbiological knowledge as well as possible interventions designed to counteract cognitive biases that can interfere with the development of scientifically informed reasoning about natural phenomena. Taken together the papers provide insights into the contributions of cognitive biases to the development of biological misunderstandings and into the life experiences and contexts that can contribute to or impede accurate learning of biological concepts. As part of a wider literature the insights provided by the authors are relevant to the design of educational experiences that will foster children's exploration and further their understanding of life science ideas. The chapters in this book were originally published as a special issue of *Early Education and Development*.

Some New World Peter Harrison, 2024-04-18 In his famous argument against miracles, David Hume gets to the heart of the modern problem of supernatural belief. We are apt, says Hume, to imagine ourselves transported into some new world where the whole form of nature is disjointed and every element performs its operation in a different manner from what it does at present. This encapsulates, observes Peter Harrison, the disjuncture

between contemporary Western culture and medieval societies In the Middle Ages people saw the hand of God at work everywhere Indeed many suppose that belief in the supernatural is likewise fundamental nowadays to religious commitment But dichotomising between naturalism and supernaturalism is actually a relatively recent phenomenon just as the notion of belief emerged historically late In this masterful contribution to intellectual history the author overturns crucial misconceptions myths about secular modernity challenging common misunderstandings of the past even as he reinvigorates religious thinking in the present Cognition Thomas A.
