Documenting Mobility in the Japanese Empire and Beyond Takahiro Yamamoto, 2022-11-07 This book tackles the question of border control in and around imperial Japan in the first half of the twentieth century with a specific focus on its documentation regime It explores the institutional development media and literary discourses and on 1 the ground practices of documentary identification in the Japanese empire and the places visited by its subjects The contributing authors covering such regions as Korea Manchuria Taiwan Siberia Australia and the United States place the question of individual identity in the eyes of the respective governments in dialogue with the global developments of the identification and mobility control practices The chapters suggest the importance of focusing more than previously on the narrative of individual identification not as a tool for creating nation states but as a tool for generating strengthening and maintaining asymmetrical relationships between people of different socioeconomic backgrounds who moved in and out of empires This book joins the effort in the recent scholarship in migration history to highlight experiences of migrants beyond the transatlantic world and that in East Asian history to investigate the space and connections beyond the boundaries of the nation states By bringing together the analyses on the trans Pacific mobility and Japan s imperial expansion and its aftermath in East Asia it shows a complex interplay between state power and moving individuals two forces whose relationships went far beyond simple competition

Beyond 1995 R.E. Pendley, J.F. Pilat, 2012-12-06 There is almost universal support for the view that the world would be an even more dangerous place if there were to be more nuclear weapon states There would be more fingers on more triggers and probably a greater risk that a trigger might be pulled with incalculable consequences It is easy to see therefore that there is a collective interest in avoiding the spread of nuclear weapons to further countries Nations do not however normally undertake or refrain from actions because of such a collective interest they do so because of their individual interests This is especially true in the field of national security A nation perceiving that it has a real interest in developing nuclear weapons is not very likely to refrain from doing so merely because it is told such development would be

bad for the world community If the global interest in avoiding the spread of nuclear weapons to more countries is to succeed conditions that make it in the interest of each individual nation to renounce nuclear weapons need to be created or maintained Fortunately conditions have prevailed in which the vast majority of nations have seen an advantage in making legally binding nonproliferation commitments An important rationale for many of these countries has been that these commitments would facilitate the transfer of desired civil nuclear technology

Beyond the Natural Body Nelly Oudshoorn, 2003-09-02 It is now impossible to imagine a world without sex hormones Women all over the world take hormonal pills to control their fertility and estrogen and progesterone have become the most widely used drugs in the history of medicine But why has the female rather than the male body become increasingly subjected to hormonal treatment Nelly Oudshoorn challenges the idea that there exists such a thing as a natural body and shows how concepts such as the hormonal body assume the appearance of natural phenomena by virtue of the activities of scientists rather than being rooted in nature *Beyond the Natural Body* tells the fascinating story of scientists' search for the ovaries testes and urine required to develop the hormonal concept investigating how sex hormones have shaped our understanding of sex and the body transforming science and medicine and ultimately redefining the relationship of women to reproduction Nelly Oudshoorn concludes by evaluating the mixed blessings of the hormonal revolution

Invoking the Beyond: Paul D. Collins, Phillip D. Collins, 2020-11-22 The Gnostic revival of the Enlightenment witnessed the erection of what could be called the Kantian Rift an epistemological barrier between external reality and the mind of the percipient Arbitrarily proclaimed by German philosopher Immanuel Kant this barrier rendered the world as a terra incognita Suddenly the world out there was deemed imperceptible and unknowable In addition to the outer world the cherished metaphysical certainties of antiquity the soul a transcendent order and God swiftly evaporated The way was paved for a new set of modern mythmakers who would populate the world out there with their own surrogates for the Divine Collectively these surrogates could be referred to as the Beyond because they epistemologically and ontologically overwhelm humanity In recent years the Beyond has been invoked by theoreticians literary figures intelligence circles and deep state operatives who share some variant of a technocratic vision for the world In turn these mythmakers have either directly or indirectly served elitist interests that have been working toward the establishment of a global government and the creation of a New Man Their hegemony has been legitimized through the invocation of a wrathful earth goddess a technological Singularity a superweapon and extraterrestrial gods All of these are merely masks for the same counterfeit divinity the Beyond

Beyond the Saga of Rocket Science Walter Sierra, 2016-12-19 Beyond the Saga of Rocket Science is a series of four closely related books that provide an amply illustrated overarching perspective to a broad nontechnical audience of the entire panorama surrounding the development of rockets missiles and space vehicles as we know them today and what the exciting future holds The books are sequential and form an integrated whole The Dawn of the Space Age Avoiding Armageddon In Space To Stay The Never Ending Frontier The Dawn of the Space Age begins with exciting tales of the earliest developers of rudimentary rockets and the deadly battles they fought in China between 228 and 1600 A D A historical fiction approach brings long ago characters and events to life Palace intrigues treachery and warmongering are interwoven with vivid depictions of courage and bravery to showcase the gradual progression of the science of rocketry from fireworks displays to effective weapons in the battlefield Readers in the West will learn something about the Eastern mindset where over half the worlds population lives today The tremendous achievements of the Wright Brothers Wilbur and Orville in the early 1900s serve as a useful backdrop for showcasing the difficulties in developing completely new technologies for practical use The Wright Brothers had to go abroad to France before World War I to garner enough support and funding to mature airplane science to the point that the U S Army took notice Building on the Wrights successes Ludwig Prandtl in Germany and Theodore von Krmn in the United States made pioneering developments in aerodynamics which are crucial to rocket flight The invention of the airplane inspired early innovators in the 1920s 1930s to lay the foundation for the giant aerospace conglomerates of today including William Boeing Boeing Company Allan Loughhead and Glenn Martin Lockheed Martin Jack Northrop and Leroy Grumman Northrop Grumman James McDonnell and Donald Douglas McDonnell Douglas These stalwarts were very foresighted and willing to take calculated risks The ingenious Dr Robert Goddard inventor of the modern rocket developed a sound theory and conducted pioneering flight tests in the 1920s 1930s while overcoming many failures However Goddards rockets were not taken seriously enough in the United States to enable the development of practical missiles and launch vehicles But Germany sure took notice World War II gave the biggest impetus ever to advancing rocket science and related technologies The Nazi war machine funded Dr Wernher von Braun and his cohorts to develop rocketdriven weapons such as the V1 and V2 which killed thousands during World War II Fortunately for America von Braun

and key members of his team decided to seek asylum in the United States when the war ended. Now the country took up the engineering of rockets in earnest. Von Braun went on to lead the American space program during the crucial decades of the 1950s and 1960s. He did more to advance missiles, rockets, spaceflight and enable manned landings on the moon than anybody else in America. Six astronauts flew solo on six Project Mercury flights, 1961-1963. Three of them joined another 13 astronauts to orbit Earth on 10 two-person Project Gemini flights, 1965-1966. Without a single failure. The Soviet Union captured their fair share of German rocketeers including the influential Helmut Grttrup. They learned everything possible from the German expatriates. Then they cast the Germans aside and undertook rocket and missile development using indigenous experts like Sergei Korolyov and Valentin Glushko. Like von Braun, Korolyov was ingenious in his own right and led the development of Soviet rocket science until his untimely death in January 1966. Engineers and scientists are today's unsung heroes. They work in the shadows without any public acclaim or recognition yet the technologies they develop touch every facet of our daily lives.
