Geriatric Home-Based Medical Care Jessica L. Colburn,Bruce Leff,Mariah L. Robertson,Mattan Schuchman,2024-11-25 Older adults are living longer with more chronic disease and functional impairment than at any other time in history Office based practice is inadequate to meet the needs of patients who have difficulty leaving their homes for routine or urgent visits and health care clinicians must choose between

trying to manage their problems via telehealth or sending them to the emergency room via ambulance. Indeed many clinicians receive little or no training in home based medical care and are unable to consider a home visit that might avert a health crisis or an emergency room visit. Other clinicians know that house calls are possible but may not know how to work them into day to day practice. In recent years a growing number of clinicians have focused their practice on home based medical care to meet the rising need. In fact there has been a substantial increase in house calls provided to Medicare beneficiaries. In 2023 over 750 000 traditional Medicare beneficiaries and in 2022 over 680 000 Medicare Advantage beneficiaries received longitudinal home based medical care. While the number of house calls has increased rapidly the number of clinicians providing those visits has markedly decreased suggesting that clinicians who are providing such care are making it the sole focus of their practice. This book is intended to be a practical reference for any clinician who has struggled to care for an older adult who has difficulty getting to the office. By describing fundamental principles of geriatric house call medicine and application to specific diseases and conditions we hope to provide clinicians with the tools they need to provide timely compassionate and high quality care for their older adult patients. The second edition has been updated to reflect changes in the healthcare system and approaches to care since the publication of the first edition. This text provides the in depth understanding of the mechanisms that guide coding and reimbursement. The text is meant to be useful to surgeons in practice both in general surgery and in surgical subspecialties, practice management teams of surgical practices and to resident physicians in surgery. Part 1 of the text addresses the CPT coding process, the relative valuation system, RVU, the ICD 9 and ICD 10 systems of classification, Medicare Part B payment rules for physicians, the DRG system and Medicare Part A payment for hospitals, alternative payment models and the myriad of quality measures of importance to surgeons. Part 2 of the text addresses specific coding in areas where surgeons historically have had the most difficulty. This is not meant to substitute for the available texts, software or courses on coding but to provide the historical background and rationale for the specific coding rules. **Principles of Coding and Reimbursement for Surgeons** will be of great value to general surgeons and surgical subspecialists in private practice, academic institutions and employed positions. It will provide direction to management teams from practice and institutional levels. It is also of use to surgical trainees and to researchers in health policy issues.
