Mit dieser Reihe werden nun die vielen Einzelergebnisse zusammengefasst und einem breiten Publikum präsentiert. Literature brings unique insights to issues involving cloning, GMOs, gene editing, and more by dramatizing their full human complexity. Literature's value for public policy is demonstrated by striking examples that range from the literary response to evolution in the Victorian era through the modern synthesis of evolution and genetics in the mid-twentieth century to present-day genomics. Outlining practical steps for humanists who want to help shape public policy, this book offers vivid readings of novels by H. G. Wells, H. Rider Haggard, Aldous Huxley, Robert Heinlein, Octavia Butler, Samuel R. Delany, David Mitchell, Margaret Atwood, Ian McEwan, Kazuo Ishiguro, Gary Shteyngart, and others that illustrate the important insights that literary studies can bring to debates about science and society. One of the most common childhood disorders, it is also one of the most controversial since first identified in the late 1950s. Everyone, from medical professionals to politicians, has debated its causes, its treatment, and its implications for children. Today physicians believe it is an inherited neurological disorder best treated with stimulants. *Hyperactive* provides the first history of ADHD, addressing why children were first diagnosed with the disorder, why biological explanations became predominant, how powerful drugs became the preferred treatment, and why alternative explanations have failed to achieve any legitimacy. Contending that hyperactive children are also a product of their social, cultural, and educational environment, Matthew Smith

demonstrates how knowledge about the history of ADHD can lead to better choices about its diagnosis and treatment A revealing and accessible study of this controversial subject Hyperactive is an essential book for psychologists teachers policymakers and parents Thesaurus of Engineering and Scientific Terms Engineers Joint Council,1967 Hammer Projects, 1999-2009 Hammer Museum,2009 Text by Ann Philbin Christopher Miles James Elaine Lauren Bonn **12 Rules for Life** Jordan B. Peña,2025-08-18 An everyday introduction to the most consequential science of modern life University of Chicago economist Gary Becker won the Nobel Prize largely for his advancement of

human capital theory the idea that investing in a person's knowledge and skills has a wide range of economic effects. Becker's writing on the subject was technical but his teaching especially in his famous doctoral course at Chicago remains legendary for its accessibility, brilliance, and applications to everyday life. In *Human Capital for Humans*, economist and former Becker student Pablo A. Pea channels this classroom approach to produce an accessible, essential guide to understanding the science that has become synonymous with modern life and the economy. With an illustrative and immersive style, Pea unpacks the human capital approach to domains such as parenting, aging, marriage, health, and household labor. The result is not only intellectually elevated but an essential introduction for learners and teachers of this subject across business, management, economics, policy, and beyond.
