Camus Does a Double-Take , **Math Insights Tb S1a S/e** ,2007 Building Blocks Gene I. Maeroff,2025-09-23 A

student's entire journey along the educational spectrum is affected by what occurs and crucially by what does not occur before the age of eight or nine. Yet early learning has never received the attention it deserves and needs. In his latest book, education expert Gene Maeroff takes a hard look at early learning and the primary grades of schooling. *Building Blocks* offers a concrete and groundbreaking strategy for improving early education. Filled with colorful descriptions and anecdotes from Maeroff's visits to schools around the country, *Building Blocks* creates a rich portrait of education in America ranging from math lessons imported from Singapore in Massachusetts to serious but joyful kindergartens in California. He speaks of the need for schools to prepare for the burgeoning enrollment of youngsters from immigrant families and for all children to acquire the habits and dispositions that will make them committed and productive students. Maeroff issues a call to action for policy makers and parents alike.

Mathematics Curriculum in Pacific Rim Countries - China, Japan, Korea, and Singapore
Zalman Usiskin, Edwin Willmore, 2008-09-01
This volume contains the proceedings of the First International Curriculum Conference sponsored by the Center for the Study of Mathematics Curriculum (CSMC). The CSMC is one of the National Science Foundation Centers for Learning and Teaching Award No. ESI 0333879. The countries China, Japan, Korea, and Singapore, in alphabetical order, which also happens to be the order of their populations, have each been in the news because of their performance on international tests and/or their economic performance and potential. They also have centralized education ministries that create a single mathematics curriculum framework followed in the entire country. In all these countries, curricula are differentiated for students with different interests, usually around Grade 10 or 11. We think the reader will agree that the papers are of very high quality, befitting the standing of the individuals who were invited, but particularly notable for our international speakers because in three of these countries, English is not the speaker's first language. Following each paper, we have included a short biography of the author so that the reader can understand the perspective of the paper's author.

Summability of Multi-Dimensional Fourier Series and Hardy Spaces Ferenc Weisz, 2013-06-29 The history of martingale theory goes back to the early fifties when Doob 57 pointed out the connection between martingales and analytic functions On the basis of Burkholder s scientific achievements the martingale theory can perfectly well be applied in complex analysis and in the theory of classical Hardy spaces This connection is the main point of Durrett s book 60 The martingale theory can also be well applied in stochastics and mathematical finance The theories of the one parameter martingale and the classical Hardy spaces are discussed exhaustively in the literature see Garsia 83 Neveu 138 Dellacherie and Meyer 54 55 Long 124 Weisz 216 and Duren 59 Stein 193 194 Stein and Weiss 192 Lu 125 Uchiyama 205 The theory of more parameter martingales and martingale Hardy spaces is investigated in Imkeller 107 and Weisz 216 This is the first monograph which considers the theory of more parameter classical Hardy spaces The methods of proofs for one and several parameters are entirely different in most cases the theorems stated for several parameters are much more difficult to verify The so called atomic decomposition method that can be applied both in the one and more parameter cases was considered for martingales by the author in 216
