Manufacturing Technology - II Anup Goel, 2021-01-01 Manufacturing Technology II is a branch of mechanical engineering which extensively deals with the production of industrial goods with the help of advanced tools and machinery. This subject gives information which covers the more practical knowledge than the theory. It provides a tool to enable production of manufacturing goods efficiently. The subject gives an idea to maximise product quality and to minimise the production cost. It also gives information about the different surface finishing techniques. My hope is that this book through its careful explanations of concepts, practical examples and figures bridges the gap between knowledge and proper application of that knowledge. **Principles of Engineering Manufacture** V. Chiles, S. Black, A. Lissaman, S.

Martin, 1996-02-02 The third edition of this text formerly known as Principles of Engineering Production has been thoroughly revised and updated and continues to provide students with a comprehensive overview of the technical considerations for the entire manufacturing process. In keeping with the developments in manufacturing technology, this new edition reflects the major advances in recent years, in particular looking at the transition to computer controlled machinery and the developments in computer applications. Beginning with specification and standardisation, it analyses the key aspects of the manufacturing process and pays particular attention to the crucial considerations of quality and cost. In addition, the coverage of materials has been extended to account for the increased availability and complexity of non-metals. The addition of a number of case studies, new worked examples and problems make this text an invaluable introduction to engineering manufacture. It is also a useful and straightforward reference text for the professional engineer.
