

The anatomy of arousal: three Internet portals

PATRICK J. CARNES

The Meadows, Weybridge, Surrey, UK

Abstract: Internet sexual behaviour offers a unique opportunity to understand processes which influence sexual. This paper studies the internet as a source of accelerated perception for individuals by examining three different genres of internet behaviour: "lurking" sites, "click and" sites, and "groups" sites. It shows all three sites are examples of acceleration that result in accelerated action, not in passivity, and trigger pursuit of sexual either personal goals, all three examples show acceleration also have implications for both research and therapy. Specific recommendations for clinical assessment and further research are made.

The anatomy of arousal: three Internet cases

A classic problem school says about 'accelerated perception' is told about a video taping of a playground to study child interactions. When the video was played at normal speed no unusual patterns of social interaction could be discerned amongst the children. By playing the tape at high speed, patterns emerged which were not discernible at normal speeds. In the video, for example, there was one girl who clearly was a catalyst for all the activity of the playground. But only was clearly visible at normal speed. At high speed she became present to all the interactions on the playground. The story is told to illustrate how technological shifts can reveal patterns in human processes. Normal viewing of the content is a classic example of accelerated perception where we are able to see social patterns more clearly than before. The speed and the impact of cybersex have literally opened a whole new field of sexual research, the outlines of which are just emerging.

In many ways the impact of cybersex has been positive. Substantial sexual isolation has ceased for those who are now able to connect others with similar sexual interests. Matching programs have facilitated people meeting others, which would never before have been possible. Sexual information and education are now easily accessible. In short the internet is helping break down sexual stereotypes and bringing us a world of rage. On the dark side of this scenario there are disturbing patterns of cybersexism at a level not seen before. This paper explores three examples in which the utilization of cybersex can become negative, competitive, or toxic. First,
