energy from fire to farming to fossil fuels In this ground breaking history of world architecture Barnabas Calder takes us on a dazzling tour of some of the most astonishing buildings of the past fifteen thousand years from Uruk via Ancient Rome and Victorian Liverpool to China's booming megacities He reveals how every building from the Parthenon to the Great Mosque of Damascus to a typical Georgian house was influenced by the energy available to its architects and why this matters Today architecture consumes so much energy that 40% of the world's greenhouse gas emissions come from the construction and running of buildings If we are to avoid catastrophic climate change then now more than ever we need beautiful but also intelligent buildings and to retrofit not demolish those that remain Both a celebration of human ingenuity and a passionate call for greater sustainability this is a history of architecture for our times
